No part of this brochure may be reproduced, stored in a database or retrieval system, transmitted, or distributed in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission from the author or a person legally authorized to act on his behalf. From the obligation of getting such a written permission are only released those who would like to prepare a single copy of this monograph for their personal use oriented towards the increase of their knowledge and who fulfil the condition that they will not use the copy prepared for any professional purpose or for accomplishing material gains, and also that they copy the entire brochure - including the title page, all items, all illustrations, and all enclosures.

Date of the latest update of the web page presented in this brochure is provided above in the top-left corner. (Note that in case of having access to several copies of this brochure, it is recommended to read the copy which has the latest date of amendment.)

This brochure publishes the text of the web page authored by Dr Eng. Jan Pająk, indicated in the title of it. In turn the author's web pages are forms of fast reporting to the readers results of scientific research accomplished by the author of this brochure. The author is aware, that this research, and the results, are unique, as no-one in the entire world undertook earlier research of topics elaborated in this brochure. Therefore ideas which this brochure presents are the intellectual property of the author of this brochure. All ideas, theories, inventions, discoveries, explanations, descriptions, etc., published here, which have documentary or evidential value, are presented accordingly to standards applicable for scientific publications (reports). A special attention the author has given to the requirement of repetitiveness, i.e. that on the basis of this brochure any professional scientist or hobby investigator who would like to verify, repeat, or extend the author's research should be able to recreate his work and arrive at the same or very similar results and conclusions.

This brochure is another one from a series of similar brochures in PDF, offered free of charges to interested readers through the totaliztic web page named [text 11.htm](#) - which disseminates PDF versions of most significant and most widely read web pages by the author. The topic of this brochure is represented also in the newest [monograph \[1/5\]](#) with following editorial details:

Pająk J.: "Advanced Magnetic Devices",  
Monograph, Wellington, New Zealand, 2007, 5th edition,  
in 18 volumes, ISBN 978-1-877458-01-9.

Contact addresses to the author valid in 2013 – i.e. during the preparation of this brochure:

[Dr Eng. Jan Pająk](#)

Perhaps you have already discovered that both, my person, as well as outcomes of virtually all of my scientific research, officially are splashed with insults, publicly scoffed at, ridiculed, blocked, discouraged from treating them seriously by people whom they could help, etc. Hence, probably you are looking into this web page out of curiosity to see what sort of "nonsense" I wrote in it that such a fun and an occasion to impress others have "all those goats that enjoy jumping on half-uprooted trees". So in order to save you reading the entire of this web page, I summarize already here what and where you can find in it. And so, in item #G4 of it, you will find e.g. the information that the Earth is subjected to the simultaneous action of as many as two different kinds of time. One of these times exists naturally in the universe. However, on Earth only rocks and entire inanimate matter are ageing in it. It elapses smoothly and much faster than our human time. Its speed of elapse so far was NOT measured by any scientist, but according to the Bible, it is around 365 thousands of times faster than the speed of the elapse of this other time in which people are ageing. Thus,

if you exactly memorise the appearance of a soft rock and then visit it at least three years later, in the meantime this rock gets older and erodes by more than a million human years - which in the case of soft rocks is to produce so significant changes in their shape and appearance, that you can notice them with the naked eye. The other one out of those two times was for us artificially pre-programmed by God. Starting from the biblical Great Flood in this artificial time are ageing only humans and other creatures having DNA. It elapses in jumps, while its jumping nature you can see yourself in a simple experiment described in item #D1 from the web page named [immortality.htm](#). Because the speed of elapse of this other, artificial time, is by these around 365 thousands of times slower than the speed of elapse of the natural time of the universe, the official science falsely claims, amongst others, that dinosaurs lived millions of years before humans - in spite that the people and all other living creatures were created during the same first week of our physical world. If you wish to read more about these two kinds of time, or about "time vehicles" with which

this artificial (other) time allows us to go back in time to years of our youth, their short descriptions can be found in item #G4 from this web page, while widely they are described, amongst others, in sub-item #C4.1, as well as in the introduction and items #A1, #C3, and #C4 from other my web page named [immortality.htm](#). Another vital information from this web page is the explanation that gravity is NOT a monopolar field for which mistakenly it was hailed by the official science (i.e. it is NOT a field similar to e.g. a pressure field or an electric field), but it is a dipolar field similar to a magnetic field. Only that because of the concentric nature of gravity, that other pole of gravity disappears from our world and emerges in a completely different world that I named the "counter-world". This "counter-world" is the most primary (original) world of the universe, in which God lives, while to which our world is like an opposite duplicate. Hence, everything in it is opposite to whatever we have in our world. For example, the substance which prevails in it, means the "counter-matter", is intelligent in its natural state - hence it forms that superior intellect which we know under

the name of "God". On the subject of this dipolar character of gravity, counter-world, and counter-matter, writes the entire this web page - with the key proof presented in item #D3. So it is a huge mistake of the old official science to state, that in the universe there is NO God nor a place for God. According to findings and proofs of the "Concept of Dipolar Gravity" described here, God exists and lives in a separate counter-world. Unfortunately, our conscious senses do NOT have access to that world of God - though unknowingly cooperates with it such our features as memories, feelings, dreams, ESP, and several other amongst our capabilities. In addition, since so-far I am the only scientist in the world, that researches this counter-world rationally, while persecutions, criticism, hostility and chronic shortages that I experience continually do NOT allow me for the luxury of e.g. building of new research instruments, so far on Earth has NOT been built yet any scientific instrument that would have an access to the counter-world. Another information that you may find here useful, is a description of the most important consequence of the fact

already well known to the official science, namely that the strong gravity affects light. This fact means, that the light emanated from objects with the gravity greater than this of the Earth, will show the so-called "red shift" (of course, if they move appropriately), while the white light from the sun falling on clear day to the ground will show the "blue shift" - this is where the blue colour of the clear sky comes from. The mechanism of both these shifts operates like water waves in the fast flowing stream - where movement of water extends or shrinks the length of these waves, depending on whether the waves move with the flow, or against the flow of this stream. Of course, the official science pretends that this phenomenon does NOT exist, because on that same "red shift" it built the entire shockingly wrong "big bang theory" about the alleged self-origination of dimensionally limited universe. In turn today's well-paid scientists typically do NOT have the courage to loud speak out about findings that contradict the widely recognized theories - in accordance with the currently prevailing scientific doctrine that **"if facts contradict the theory, then so much worse for these**

**facts and worse for the scientists who interpret these facts as true".** So those scientists who today stubbornly insist on the truth, end up like me, while their truths meet the fate of my discoveries and inventions. About this "red shift" inform items #D2 and #D2.1 from this web page. Still other information presented on this web page include, among others, descriptions of work of telekinesis (see item #B3) - that is, moving objects by grabbing their counter-material duplicates (spirits) existing in the counter-world. Also included are: a description of our different body, by the folklore called aura or spirit (see item #E1), descriptions of the mechanisms of telepathy and permanent telekinetisation (items #F1 and #F2), feelings, nirvana and depression (item #E1), an explanation of what is energy and gravity (items #G1 and #G2), and a number of still other previously unknown truths and facts - typically denied or explained incorrectly by the old, official, monopolistic human science. The above summary of this web page should also be complemented with information, that the "Concept of Dipolar Gravity" described on it has provided the scientific foundations for

the development of completely new philosophy described under the name of "totalizm" on my other web page [totalizm.htm](#). In turn this new philosophy, together with the Concept of Dipolar Gravity, provided the philosophical and scientific foundations for a completely new science called the "totaliztic science" - in the spirit of which this web page is written, while the definition and full description of which is provided in items #C1 to #C6 from a different web page named [telekinetics.htm](#).

---

## **Part #A: Introductory information about this web page:**

In 1985 I was granted the honour of developing one of the most vividly discussed scientific theories of present times. This theory is called the [Concept of Dipolar Gravity](#). Everyone who familiarises himself with it, seems to take towards it one out of two most radical stands possible. Namely, either loves it and promotes it like his or her own theory, or starts vigorously fight it out. This theory displays a number of attributes, which in the same configuration have not appeared in any other scientific theory developed on the Earth so far. For example, (1) the correctness of it is supported by a huge number of facts and phenomena which are already identified. (2) It redefines completely almost all aspects of the universe which surrounds us - becoming in this way the "[theory of everything](#)" searched for so long by everyone. (3) It explains, clarifies, and makes understandable all phenomena and mysteries which previously remained for us unexplained (e.g. telekinesis, telepathy, ESP, animal instinct, the existence and nature of the "other world", the existence, self-evolution, and nature of God, the mechanism of feelings, the work of acupuncture, the operation of human brain, principles of generation of the so-called "free energy", morality, karma, happiness, mechanism which governs weather and climate, the origin of magnetic field and electrical charges, energy, gravity, shape of the universe, etc., etc.). (4) It documents that the so-called "red shift" in light of stars does NOT

originate from the "Big Bang" - thus it invalidates completely the "founding theory" of adherers and promoters of "atheistic evolutionism" (see items #D2 and #D2.1 below). (5) It provides scientific and philosophical foundations for the official formation on the Earth a completely new "totalistic science" capable of breaking the "monopole for knowledge" of the "atheistic orthodox science" to-date and initiating the much more beneficial for people research of the reality from an opposite than previously "a priori" approach (i.e. from the approach which scientifically considers and researches the existence and actions of God) - as this is explained in item #A2.6 of the web page named [totalizm.htm](#) and item #C1 of the web page named [telekinetics.htm](#). Unfortunately, because of its breakthrough nature, the [Concept of Dipolar Gravity](#) encounters a very powerful action of the "mechanism of self-punishment of immoral communities", which mechanism in item #B4.4 of the web page named [mozajski uk.htm](#) is described under the names the "curse of inventors" and the "inventive impotency". In fact, the gaining of recognition progresses for it equally difficult as in past progressed the recognition of the theory that the Earth is spherical, or later was progressing the recognition of the Darwin's discovery that [God](#) utilises the [gradual evolution](#) for the continuous improvement of the universe - means that God have NOT created everything at once and in the final version of it. (As we know, even today people do exist, who believe that the Earth is flat.) Just because of this huge controversy of the [Concept of Dipolar Gravity](#), and also because of the powerful resistance which this theory encounters during the dissemination, I decided to develop this web page. The goal of this web page is to explain to the reader in simple words, what actually this "theory of everything" is, what benefits brings us learning it, and how it explains the most significant phenomena which surrounds us. (Of course, this theory explains much more. But because of limitations imposed on the volume of this web page, I am able to present here only a brief summary of it.) In this way the web page allows the reader to make up his mind on his own about the merit of this theory, so that he or she does NOT need to relay in this matter on mostly negative opinions which may be stubbornly imposed on him or her by the sworn enemies of this progressive theory.

## #A1. What is this [Concept of Dipolar Gravity](#):

The name "Concept of Dipolar Gravity" is assigned to a relatively new scientific theory developed by the author of this web page in 1985, which theory is capable of introducing a [paradigm shift](#) to our understanding of reality, as it provides more complete and more coinciding with the empirical findings explanation for the structure and operation of the reality. This explanation is based on an **informatics-derived model of reality**. The model describes reality as similar to a present computer, i.e. composed of a kind of "liquid hardware" called "counter-matter", and "natural programs" contained in this liquid hardware and defining how it should behave. The most easily noticeable kind of these

natural programs, by the science is called the "laws of physics". The elementary layer of these "natural programs" orders the liquid counter-matter to behave in such a manner, that it forms from itself the elementary particles. Next layers of these natural programs form from these elementary particles the entire atoms, then molecules, tissues, bodies, etc. In the result, according to this "informatics-derived model of reality", the entire human is simply an equivalent of present image from the screen of modern computer, only that formed in three-dimensions from the counter-matter and maintained in operation by a whole pyramid of natural programs - as more comprehensively explains this item #C1 from the web page [soul proof.htm](#). A similar computer image (or a hologram) formed from intelligent counter-matter is e.g. the entire Earth, solar system, and even the universe.

The explanation for the reality that surrounds us, which is provided by the Concept of Dipolar Gravity, represents a more advanced alternative to a very primitive explanation used by the official science to-date - which could be described that it is based on a **material model of reality**. In this to-date scientific model, reality is described as formed exclusively due to mutual interactions of "stupid" matter. This in turn does NOT allow to explain naturally and unambiguously what are e.g. laws of physics, time, gravity, telekinesis, telepathy, intelligence, soul, God, etc.

The scientific foundations of the [Concept of Dipolar Gravity](#) result from the proving by this theory that the gravity field belongs to a general category of the dynamic dipolar fields, not to the static monopolar fields to which the gravity was categorised by the Earth science to date. Therefore, in the light of this concept, gravity is more similar to a dipolar magnetic field, or to a dipolar field formed by liquids or gases pumped dynamically through any pipe, e.g. through the interior of our home vacuum cleaner, than to a monopolar field formed by static compression of e.g. air into tyres from our car. In turn this qualifying of gravity into dynamic dipolar fields, leads to a completely different than so-far description of the design and operation of the universe. This web page tries, amongst other, explain how the universe governed by such a dipolar gravity really looks like.

## #A2. How looks like and operate this dipolar gravitational field (i.e. the field described by the "Concept of Dipolar Gravity"):

We probably still remember this from classes of physics, that there are two different kinds of force fields. Their references usually use names (1) a **monopolar field**, and (2) a **dipolar field**. The first of these is a static field, means it is formed in phenomena in which force interactions appear while simultaneously there is a complete lack of motion. In turn the second one is a dynamic field, means it appears in phenomena when it is the motion which

releases the action of any forces. Examples of a static monopolar field is an electrical field, and also a field formed e.g. after compressing the air in a tyre from our car. In turn examples of a dynamic dipolar field is a magnetic field, and also a field formed at the inlet to our home vacuum cleaner when through this cleaner a stream of air flows. Each one out of these two basic kinds of fields displays different attributes. And so, for example the like "monopoles" from a monopolar field always mutually repel each other. It is because of this mutual repulsion of identical monopoles that the air from tyres in our car uses any opportunity to escape, while objects charged electrically push their charges onto the surfaces - the consequence of which is that with the elapse of time they gradually discharge by themselves. But in dipolar fields is in opposite, i.e. **all objects subjected to the action of a given pole of a dipolar field are mutually "compressed" towards each other, thus forming a dynamic pressure well known in hydromechanics and described by the so-called "Bernoulli equation"**. This compression of all objects on a pole of dipolar fields makes an impression that these objects mutually "attract" each other. For example, it is because of this "compression" of objects exposed to the action of a dipolar field by a given pole, that a ping pong ball inserted into a stream of water from a fountain maintains hovering in this stream of water and looks as if it is "attracted" by this stream of water. Similarly is with the magnetic field, which makes an impression that it attracts to itself all objects susceptible to its action (e.g. ferromagnetic). Of course, there are numerous further such attributes unique for static monopolar fields and dynamic dipolar fields - their list is presented in subsection H1.1.1 from volume 4 of [monograph \[1/5\]](#). If one analyses attributes which characterise the gravity fields, then it turns out that all attributes of gravitation coincide exactly with attributes of dynamic dipolar fields, and contradict attributes of static monopolar fields. For example, gravity fields cause the mutual "compression" of particles of matter, which (the compression) makes an impression as if this matter "attracts" other matter. But it is only an impression, because the gravity acts onto matter in exactly the same manner as all dynamic dipolar fields act onto objects susceptible to their forces. For example, the same as onto matter, the gravity acts also on different objects - e.g. on light (i.e. it is known that a powerful gravity field bends the path of electromagnetic radiation - as is perfectly known and utilised e.g. in astronomy). So both, matter and light subjected to gravity display an effect which can be confused with them being "attracted" - i.e. the effect identical to the one which is experienced by the ping pong ball hovering within a dipolar stream of water from a fountain and looking as of it is "attracted" by this water. Means that matter behaves totally opposite to the alike carries of monopolar fields which always repel each other (we can see this repulsion e.g. amongst alike electrical charges, or in particles of the air from tyres of our car). The fact that attributes of gravity coincide with all attributes of dipolar fields practically means, that gravity is in fact a dynamic dipolar field - in spite that the Earth's science to date erroneously qualified it to monopolar fields. So it is about time we repair this error of science to date and qualify gravity correctly to the group of dipolar fields.

If one accepts the evidence (which exists for long time and is already well identified) stating that gravity is a dynamic dipolar field, then one simultaneously must accept the fact that the universe looks and works completely differently than it was described by scientists to date. After all, the to date description of the look

and work of the universe were worked out and described for the highly erroneous (non-written) fundamental assumption, that gravity is a monopolar field. Since the scientific descriptions of the universe to date were based upon such an erroneous foundation, it is obvious that almost everything that they state must also be erroneous from the very foundations.

The first finding which hits our eyes immediately after we recognise the merit of the Concept of Dipolar Gravity, is that with the dipolar gravitation the universe must be composed from two separate worlds, similarly like in a vacuum cleaner there are two poles for the air which flows through it. (These two poles are the "inlet" for the air, and the "outlet" for the air.) Our **physical world** in which we live and which we learn with our senses is just an "inlet" for the gravity. In turn behind an invisible barrier there is another world which is parallel to ours. The Concept of Dipolar Gravity calls it the **counter-world**. This counter-world is the "outlet" pole for gravity field. Similarly as our world is filled up with **matter**, also this other counter-world is filled up with a substance which is appropriate for it. Only that this substance from the counter-world must display attributes which are exactly opposite to attributes of matter. The Concept of Dipolar Gravity calls **counter-matter** this substance from the parallel counter-world, which displays attributes opposite to these of our matter. Although the recognising the Concept of Dipolar Gravity introduces a large number of this type of shocking findings, just only the findings that the universe is composed of two parallel worlds (not just a single one) having a physical nature, which are filled up with two (not just a single one) kinds of substances having completely opposite attributes, turns upside down everything that our science to date, which is founded on the erroneous monopolar assumption, tries to tell us. After all, such two-world universe from the Concept of Dipolar Gravity, is more similar to the one explained by religions, than to the one which is being described by present physics or astronomy. So let us read the rest of this web page in order to learn a bit more of strange truths about it.

### **#A3. To-date history of the Concept of Dipolar Gravity:**

The development of the Concept of Dipolar Gravity started from my humble attempts to explain what actually is this gravity field, what character it displays, how it works, etc. In the result of these attempts, in 1985 I formulated an entire new scientific theory on the subject of gravity field. It is this theory that I named the **Concept of Dipolar Gravity**. After I finished the development of this theory, it turned out, that from just an ordinary scientific theory, which only supposed to explain how gravity field works, it turned out to be the **theory of everything** that was searched for so long. It seems to provide answers to practically all questions that humans may have. In order to give you some idea, as how wide range of questions this theory answers, I suggest to consider the wide range of key words and key phrases incorporated into this concept. Amongst other questions, the Concept of Dipolar Gravity also answered these very old ones (by the orthodox

science to-date considered to be unanswerable), e.g. whether we have souls and spirits, whether God does exist, how our brain operates and why we sometimes remember things that happened before we were born, how telekinesis, telepathy and acupuncture works, what are feelings, what is [nirvana](#), what is radiesthesia, what is energy, what is time, how to build [time vehicles](#), and many more.

Immediately after being developed the Concept of Dipolar Gravity was published in a whole range of publications. Thus, descriptions of this theory are available to interested researchers starting from 1985 (means during the last over quarter of century). Currently the most widely circulated publication of it is contained in volumes 4 and 5 of my newest [monograph \[1/5\]](#) entitled "Advanced magnetic devices". (Notice that copies of this monograph [1/5] can be downloaded free of charge via menu or green links from this web page, and also from other web pages listed in item #K2.) But almost the same complete versions of the Concept of Dipolar Gravity were also published in volumes 4 and 5 of my older monographs marked [\[1/4\]](#) and [\[8/2\]](#) that also are disseminated free of charge via internet. Brief summaries of the Concept of Dipolar Gravity are also available on various web pages. One can find these web pages through "search engines" after using the name of this theory for key words, i.e. after providing the key words "[Concept of Dipolar Gravity](#)".

This web page is another one amongst internet publications on the subject. It is aimed at explaining most important findings of this concept in a manner that would be understandable for laymen. Therefore this web page summarises briefly most vital parts of the Concept of Dipolar Gravity, for simplicity and in order to shorten presentations removing from them almost the entire apparatus of logical deductions and almost all evidence. Unfortunately, after the removal of deductions which explained "why" this concept arrived at specific findings, and also after the elimination of evidence which proves that these findings coincide with the reality, the presentation of subsequent explanations in a manner that would NOT sound naive but still would be understandable for laymen, turned out to be extremely difficult. Therefore I would like to notify readers here that this web page only summarises **what** the Concept of Dipolar Gravity determined and states. In turn to learn **why** it states this instead of something completely different, and also **which evidence confirms this**, the reader should reach for these monographs indicated in the previous paragraph, which contain the complete presentation of this concept.

## [#A4. Textbooks with full descriptions of the Concept of Dipolar Gravity:](#)

As this already was mentioned in previous item #A3, complete and the most recently updated textbooks of the Concept of Dipolar Gravity are disseminated free of charge via the internet in the form of volumes 4 and 5 of two my newest monographs marked with symbols (click onto such a green symbol-link to download a selected free monograph) [\[1/5\]](#) and [\[8/2\]](#).

---

## **Part #B: Explanations of the Concept of Dipolar Gravity for most basic ideas:**

### **#B1. Counter-material duplicates of physical objects, means "phantoms" ("spirits" or "ghosts") of these objects:**

The Concept of Dipolar Gravity postulates, that the universe must be composed of two parallel physical worlds (i.e. "our world", and the "counter-world"), the attributes of which are to each other as attributes of spaces that prevail at opposite poles of magnetic dipoles. These two worlds are separated from each other by impenetrable barrier, while to each one of them an opposite pole of gravity extends. Because of the nature of gravity, which requires that this field must always link some clusters of substances, all gravity dipoles are behaving as kinds of "marriage bounds", which link with each other into symmetrical pairs, all similar particles of substances that prevail on both ends of given gravity dipoles (i.e. substances that prevail in both these worlds). In the result, for every object that exist in one of these two worlds, the gravity field forms an identical duplicate that appears in the second of these two worlds. Thus one of the major discoveries of the Concept of Dipolar Gravity, is the postulate, that all material objects that exist in our set of dimensions (i.e. existing in "our world") must have their counter-material duplicates that exist in the parallel set of dimensions (i.e. duplicates existing in the "counter-world"). Actually the real existence of these counter-material duplicates can already be conclusively proven with our present technology by showing them with the use of Kirlian cameras. The best experiment which proves the existence of counter-material duplicates is the so-called "leaf ghost effect" described by Daniela Giordano in subsection C9 of [treatise \[7/2\]](#), and also mentioned in item #D1 of this web page. (In this effect the Kirlian camera shows the shape of a counter-material duplicate of a whole leaf, even if someone cuts this leaf in half and puts on the camera only a half of it.)

The fact, that according to the Concept of Dipolar Gravity every material object existing in our physical world has its own counter-material duplicate existing in the counter-world, introduces for us immensely vital consequences. After all, it realises to us, that the dipolar gravity confirms exactly what we were informed about by all religions. Religions for a long time tell us, that independently from our physical bodies, each one of us have also a "phantom" or a "spirit" existing in a separate world. This "phantom" is actually the counter-material duplicate of a given physical object that is described here. The Concept of Dipolar Gravity not only confirms the statement of religions, but even extends

and generalises it. It explains that such a "phantom" (means such a counter-material duplicate) exists not only for people, but also for animals, vegetation, and even for objects which so far were considered to be "dead" - such as stones, furniture, cars that we use, computers, etc. (If the reader does not believe that his car has its own phantom, then I suggest to take this car into a longer drive when the reader is in a bad mood, while at a nearest opportunity to swear at the car or, even better, to attack it with a hammer - and the reader experiences what happens during this drive. If one does not wish to risk just such a check, then it is enough to recall in what mood one was when one had the last traffic accident in his car, and what one thought then about his car.) The most extensive and complete descriptions of counter-material duplicates from the counter-world are contained in subsections I5.1 and I3.4 from volume 5 of my newest [monograph \[1/5\]](#).

## **#B2. Explanation of the Concept of Dipolar Gravity, that magnetic field is a stream of circulating counter-matter:**

Physical attributes of counter-matter, such as the lack of inertia or viscosity, cause that this substance can be imagined as a hyper-active liquid. This liquid continually forms various circulations, streams, whirls, etc. - as more comprehensively is explained on a separate web page e.g. about the mechanism of formation of [hurricanes](#). A simplest object known to us, which forms just such a circulation of this extraordinary liquid is every magnet. As this is explained by the [Concept of Dipolar Gravity](#), every magnet is simply a kind of "fan" or "vacuum cleaner" which creates a rotation of counter-matter along closed circuits. Of course, every magnet is linked by gravitational interactions with the counter-matter which it puts into the circulation. Thus, if two such magnets are directed towards each other with their like magnetic poles, then they must mutually repel each other. This repulsion is identical as the one that appears between two fans which blow at each other. Only that fans blow the viscous air, while magnets "blow" the counter-matter which is deprived viscosity and inertia. Therefore two magnets mutually repel each other even when they are directed towards themselves with their "inlet" poles (I).

The explanation of the [Concept of Dipolar Gravity](#), that "magnetic field is simply a stream of circulating counter-matter" has this consequence that in fact in this concept every magnet has two poles like a fan, namely an "inlet" (I) pole and an "outlet" (O) pole. My research established, that the inlet pole (I) of every magnet is this pole which in the Earth's magnetic field is located near the northern geographic pole "N" of Earth. In turn the outlet pole (O) of every magnet is this one which in the Earth's magnetic field is located near the southern geographic pole "S" of Earth. Therefore our planet Earth actually works like a huge vacuum cleaner, as one can appreciate by viewing e.g. polar lights (auroras) or the ozone hole.

There is available a huge body of evidence which documents the correctness of the above explanation for the mechanism of formation of magnetic field. A description of this evidence is provided in subsection H5.3 from volume 4 of my newest [monograph \[1/5\]](#). For these readers who like to touch and see the evidence, one of the most tangible kinds of such evidence is so-called "**onion charcoal**". It is described and illustrated more comprehensively on a separate web page named [evidence.htm](#). This charcoal is formed in UFO vehicles in the result of sucking organic matter by a powerful stream of counter-matter circulated by propulsion systems of these UFOs. Expressing this in other words, because propulsors of UFO vehicles always form extremely powerful circulations of counter-matter, when these vehicles fly low above the Earth, they act like powerful vacuum cleaners sucking from the ground leaves, grass, and all sorts of other light rubbish. In turn, after sucking it, this organic matter is compressed at the inlets (I) of UFO propulsors, and then magnetically scorched. So during landings of these UFO vehicles it sometimes crumbles and falls down to Earth.

In a quite similar manner as the magnetic field, counter-matter forms also **electrical field**. Only that electrical field is not the circulation itself, but a change of pressure of counter-matter caused by this circulation. More about the mechanism of formation of electrical field is explained in subsection H5.1 from volume 4 of my newest [monograph \[1/5\]](#).

## #B3. How [telekinesis](#) works:

The mutual relationship between each material object existing in our set of dimensions (i.e. in our world) and its counter-material duplicate existing in a parallel set of dimensions (i.e. in the "counter-world") can be described with analogies or similarities between an object and its mirror reflection, or with similarities of computer hardware and computer software, or differences between the idea of 'body' and 'spirit' postulated by various religions. Similarly like an image and its mirror reflection, both parts of an object are exact copies of their opposite duplicate, and also they exactly imitate each other's movements. Moreover, both - the material object and its counter-material duplicate - can also be independently taken hold of and dislocated in space. But because of the gravitational links between them, independently of which part is grabbed and dislocated first, the other part must imitate exactly its motion. For this reason, depending on which part of an object is grabbed first and thus first dislocated in space, the Concept of Dipolar Gravity distinguishes between two different types of motion, named "physical motion" and "telekinetic motion". A **physical motion** occurs when the material part of an object is moved first, whereas the counter-material duplicate is pulled behind it by forces of the gravitational links. In turn a **telekinetic motion** occurs when the counter-material duplicate is moved first, whereas the material part of this object is pulled behind the counter-material duplicate by forces of their mutual gravitational links. To illustrate this with an example, the Concept of Dipolar Gravity shows that the telekinetic motion is like forcing an object to move by shifting its reflection in a mirror, so that this re-located reflection causes the object to move also. Of course in order for this

example to work in reality, light would need to behave like gravity forces. The other, even more illustrative explanation for the telekinetic motion would be to liken it to the "shifting material objects by dislocating their counter-material 'spirits'".

The term **telekinesis** is a popular name for telekinetic motion described here. Telekinesis have two main versions, namely human and technical. A human version of telekinesis usually is described by the term "psychokinesis". Most frequently encountered examples of it include telekinetic bending of divining rods, and levitation. In turn technical version of telekinesis most frequently is manifested in the form of so-called "permanent telekinetisation of substances", described in item #F2 from this web page. Other source of technical telekinesis are so-called **free energy devices**.

In 1924 the great French physicist, Louis DeBroglie, published the very important finding, sometimes called "Principle of the Symmetry of Nature". It states, that in our Universe everything is strikingly symmetrical in many different ways. Some more common manifestations of this symmetry are discussed in subsection H6.1 from volume 4 of monograph [1/5]. For example, everything has an opposite of itself. This means that every particle has its own antiparticle (e.g. electron and positron, proton and antiproton). Also every phenomenon must have its own anti-phenomenon.

The DeBroglie's "Principle of the Symmetry of Nature" indicates a fundamental rule which is in power for the entire our universe, namely that "every phenomenon must have an appropriate anti-phenomenon". So far a large number of phenomena and corresponding counter phenomena has already been discovered, which confirm the correctness of this rule. For example, the existence of electrical luminescence utilized in fluorescent bulbs and in various light-emitting diodes to transform electricity into light, has a counter phenomenon in the form of the photoelectric effect that in photocells and solar panels transforms light into electricity. The so called "left hand rule", also called the "motor effect", which describes phenomena used for the transformation of electricity into motion, has its counter rule in the form of "Fleming's right hand rule", also called the "generator effect", which works in reverse, i.e. transforms motion into electricity. The Seebeck Effect, which produces a flow of electrons through a junction of two dissimilar conductors being heated, has its counter phenomenon in the form of the Peltier Effect, which causes the heating and cooling of materials in a similar junction when a current is flowed through it. The piezoelectric effect which converts the deformation of a crystal into electricity, and which is utilized e.g. in piezoelectric lighters to produce an igniting spark, has its counter-partner in a phenomenon which also is called "piezoelectric effect", although it works in a reversed manner - i.e. it converts the electric impulse into a deformation of a crystal (this counter-phenomenon is utilized for example in piezoelectric vibration generators, and also in our quartz watches). Etc., etc.

If we find an exception to this DeBroglie's symmetry of nature, it is obvious that its anti-partner still remains undiscovered. Until 1985 one such an exception was gravity field. However, the Concept of Dipolar Gravity described on this web page indicated that the anti-partner for the gravity field prevailing in our world is hiding from us in the counter-world. Another exception from the symmetry of nature was the phenomenon of friction. Therefore the intensive search for the

anti-partner of friction was fully justified. This anti-partner was revealed during the research on the telekinetic motion. Namely, the phenomenon of telekinesis turns out to be an exact reversal of the phenomenon of friction (means telekinesis is an anti-phenomenon for friction). **In the exactly reversed manner as the phenomenon of friction spontaneously consumes energy of motion to produce thermal energy (i.e. friction transforms motion into heat), the phenomenon of telekinesis spontaneously consumes thermal energy contained in the environment of objects moved telekinetically and produces motion (i.e. telekinesis transforms heat into motion).** This extraordinary ability of telekinesis, to extract thermal energy from the environment and transform this extracted heat into motion, introduces immense consequences for our energy production. After all, it allows to build technical devices, which due to the release of technical version of telekinesis will spontaneously absorb thermal energy from their environment and convert this energy into a useful form. Such devices are popularly called [free energy devices](#). Several their prototypes which already exist are described on the separate web page that is devoted to them.

The spontaneous consumption of heat from the environment during the formation of telekinetic motion has several side effects. For example, it causes that close to such technical devices which produce telekinetic motion, rapidly becomes very cold. This temperature drop can even be sensed, when the telekinetic devices which cause it remain invisible to us because they work in the "state of telekinetic flickering" described in next item of this web page. This is the reason why folklore states, that after any "supernatural" being appears, always an intense cold spreads over a given room. The second consequence of telekinetic motion which hits our eyes, is the appearance of an unique glow which is called the "**extraction glow**". An example of it is shown on photo from "Fig. #1". These side effects which accompany telekinesis, i.e. the temperature drop and the appearance of the extraction glow, make possible for almost every reader to complete empirical experiments which are able to illustratively convince him that the Concept of Dipolar Gravity is correct.

The technical version of telekinesis is relatively simple for releasing. It is manifested every time when the force lines of magnetic field are accelerated or decelerated. This easiness of triggering the technical version of telekinesis turns out to be very promising in utilisation of this phenomenon for propelling purposes. It is possible to build space vehicles with magnetic propulsion, almost identical to the one described on a separate web page and called the [magnocraft](#), which will be moved in space with the use of the phenomenon of technical telekinesis. The the Concept of Dipolar Gravity calls these vehicles the "magnocrafts of the second generation". The comprehensive description of these vehicles is presented in chapter LC from volume 10 of my newest [monograph \[1/5\]](#).

Much more information about telekinesis is presented in subsection H6.1 from volume 4 of my newest [monograph \[1/5\]](#). In turn various technical implementations of telekinesis are described in chapters K and L from volumes 9 and 10 of monograph [1/5]. To the description of telekinesis is also devoted a separate web page named [telekinesis](#). At this point it is worth to notice, that the sole fact that telekinesis does exist in spite that our official science based on erroneous foundations of monopolar gravity was unable to explain this

phenomenon, is still another evidence in a huge pool of empirical confirmations which support the correctness of the Concept of Dipolar Gravity described here.

**Fig. #1 (H1 in [1/5]):** The "extraction glow" emitted spontaneously by all objects dislocated on principles of telekinetic motion, which during their motion encounter an opposite force that opposes their motion. This glow is like a "supernatural" white light emitted from the space that directly surrounds objects moved telekinetically. Means, it is emitted from the space which loses the thermal energy extracted spontaneously from this space by telekinetically moved objects. This glow is very similar to a cold glow of the Moon. In past it was considered to be supernatural. On the above photograph it is emitted from the space surrounding the divining rod which was moved on principles of human telekinesis. Such a "supernatural" extraction glow, together with the temperature drop, are two most significant indicators of telekinetic motion. Their appearance allows us for a simple distinguishing between a telekinetic motion, and an ordinary physical motion.

Extraction glow is generated when, according to the so-called "Postulate of

Interchanging Thermal Energy with the Environment", described in subsections H6.1.3 and H1.3 of monograph [1/5], the objects moved telekinetically must compensate their consumption of energy through a spontaneous extraction (conversion) of thermal energy contained in the close environment of these moved objects. Therefore, the result of such rapid extraction of thermal energy must be the fall of electrons in the atoms from the affected area, down into their lower orbits. Quantum physics states that such a fall of electrons into lower orbits must be accompanied by the emission of photons detectable on a sensitive photographic film as a kind of "extraction glow". Thus the consequence of a telekinetic motion must be the glow of atoms of matter which surrounds the telekinetically moved object. The extraction glow appears not only in all forms of psychokinesis caused by the human brain, but also in the "technical" equivalent of this phenomena occurring in devices which utilise telekinesis for their operation. The most frequent subjects (and therefore also the most easily available for research) utilizing the human version of telekinesis (usually called the "psychokinesis"), are dowsers whose success in searches for water is indicated through the psychokinetic bending of their divining rods. The above photograph illustrates the powerful extraction glow which appears during such a bending. It was originally published in two books by Christopher Bird entitled: [1FigH1] "The divining hand" (1st edition, E.P. Dutton, New York 1979, ISBN 0 525 09373 7, page 7) and [2FigH1] "Divining" (A Raven Book, London 1979, ISBN 354 043889, page 7). At the beginning of my research on the phenomenon of telekinesis I also have taken my own series of photographs of divining rods, capturing a weak extraction glow which appeared on them. Although I managed to register cases which were sufficient for proving that my theories are correct, radiesthetists whom I photographed did not generate as spectacular glows as the one shown on the above photograph. My research revealed that individual dowsers, similarly like individual healers, are able to generate the human telekinesis of varying intensity. People able to generate an effect with the intensity so high like this one shown on the above photograph appear extremely rarely. Further descriptions of the above photograph are provided in captions under illustrations from Figure H1 in monograph [1/5], and Figure L1 in monograph [8] (all these monographs are available for free from "Menu 2" on this web page).

## **Part #C: Technical applications of the Concept of Dipolar Gravity:**

## #C1. The state of telekinetic flickering:

The mechanism of telekinetic motion differs significantly in a whole range of aspects, from the mechanism of physical motion. A very significant one amongst such differences, is that during telekinetic motion the moved object changes its consistency from matter into a kind of energy, or into a kind of a non-material pattern. During this change of consistency, the object disappears from the view for a very small duration. After all, it exists then exclusively in the form of energy, not in form of matter. So during telekinetic motion a given object is visible only at the starting point of this motion, and then again after the motion is completed. In turn during the course of this telekinetic motion the object becomes invisible. Only that because of the huge speed of completion of telekinetic motion, the period of time for the duration of which a given object becomes invisible to human eyes is very short. However, this period of time can be artificially extended by its fast repetition, means through the technical formation of an extremely unusual, so-called "state of telekinetic flickering".

This "**state of telekinetic flickering**" is simply a fast repetition of impulses of telekinetic motion. These impulses are carried out so fast, that the short durations of time when the object subjected to the telekinetic motion changes its consistency into an energy invisible to human eyes, start to dominate the elapse of time. Means, that the object subjected to these impulses, is longer invisible than visible, and thus it completely disappears from the human sight. In fact, this state of telekinetic flickering utilises exactly the same phenomenon which causes that in our cinemas a sequence of static frames on film becomes seen as a moveable picture. Only that in the state of telekinetic flickering the subsequent impulses of telekinetic motion which cause that the object disappears from the view are repeated usually with huge frequencies of around 3000 Hz - for details see subsection K5.1.1 from volume 9 of monograph [1/5]. (For comparison, the motion picture in cinemas was formed in past with the frequency of flickering amounting to around 24 frames per second, while the picture in our TV flickers with the frequency of 50 Hz.) Such a fast repetition of these impulses of telekinetic motion causes, that the solid object subjected to these impulses becomes completely invisible to human sight.

The state of telekinetic flickering has also this attribute, that in the brief moments of time, when a given physical object becomes energy, atoms of this object can be shifted between atoms of another solid object. In this way vehicles propelled telekinetically are able to move through any solid objects. All solid objects obstructing their way behave then as if they are made of some strange liquid, not of solid matter.

Much more information about the highly extraordinary state of telekinetic flickering is presented in subsection LC3 from volume 10 of my newest [monograph \[1/5\]](#).

## Part #D: Phenomena and facts which confirm the correctness of the Concept of Dipolar Gravity:

### #D1. Which evidence confirms the correctness of the Concept of Dipolar Gravity:

Already now accumulated is a whole ocean of empirical evidence which confirms that the counter-world definitively does exist and thus that the Concept of Dipolar Gravity is correct. Let us indicate here several examples of this evidence.

People are, of course, the most convinced when they can see something with their own eyes. English saying goes that "seeing is believing". As it turns out, the existence of the counter-world, or more strictly the existence of the counter-material duplicates ("ghosts" or "phantoms") formed in the counter-world, in fact can be seen with our own eyes. It is enabled by the so-called **Kirlian photography**. It allows us to see objects which exists in this counter-world - but do NOT exist in our world. The most illustrative pictures from this counter-world are formed during the so-called "ghost-leaf experiment" carried out with the Kirlian camera. In this experiment, a half of a leaf is removed, while the remaining half is placed on the Kirlian camera. But the camera shows the whole leaf. In a similar manner the Kirlian camera shows pictures of whole amputated fingers - the duplicates of which still are present in the counter-world. (More about this "ghost-leaf experiment" is explained in subsection C9 from [treatise \[7/2\]](#).)

In a visual manner effects of the existence of so-called "whirls of counter-matter" from the counter-world, can also be noticed on pools of water formed after rains. Perhaps the reader noticed at some stage, that after a rain forms on the ground such pools of transparent water, waves formed on surface of these pools disclose rapid movements of something invisible inside of these pools. These movements are not caused by wind, because they appear and disturb the pools with equal force also in windless days. Besides, if one seeks them intentionally then they can be seen in our bath tabs and in saucers with water (even when water is hot). They are also not any water creatures, because the transparent water reveals that there is lack of any living creatures in it. But still something sporadically disturbs the surface of such pools, causing the formation of trails on this water, similar to these from invisible miniature powerboats. This invisible something, that penetrates and disturbs water after each rain, are so-called "**whirls of counter-matter**". Huge versions of these whirls cause hurricanes and tornados, and also propel sea currents on Earth. These huge versions are described on the web page about [hurricanes](#). But independently from these huge ones, in the counter-world also smaller versions of these

whirls do exist. They have diameters of strings and sizes of e.g. elastics from underwear. It is the motion of these smaller versions of whirls of counter-matter through the pools of water that can be visually noticed by us after every rain.

The existence of counter-world is also described by almost all religions. After all, this is the same world in which our ghosts stay. So another one commonly known evidence for the correctness of the Concept of Dipolar Gravity are relatively agreeable with each other statements of almost all religions in existence on Earth.

The existence of counter-world can also be proven scientifically by analysis of behaviour of force lines of gravity field. Namely, a wealth of evidence confirms that force lines of gravity field display a dynamic dipolar character, just similar to the dynamic character displayed by magnetic field. An example from this category of evidence, is the "compression" force (by us perceived as "attraction") exerted by gravity not only onto matter, but also onto all other objects, e.g. onto light - as explained in item #A2 of this web page. So similarly like magnetic fields, gravity also has two poles (namely inlet "I" and outlet "O"). Only that in spite of this dipolar character of gravity, in our world we see only the first pole (i.e. the inlet "I"). This practically means that the second pole of the dynamic gravity field disappears from our world and reappear in another, parallel world. Unfortunately, because our senses are located in this physical world, we do not see what happens in this parallel counter-world. This is a bit like with people who swim in a sea. Because their eyes remain above the level of water, they are not able to see that under the surface of water another underworld is hidden. But the fact of the existence of this another world is disclosed by the course of phenomena which we are able to witness. After all, all such phenomena, which are carried out simultaneously in both worlds, must display a dual character. And in fact, for example light is already know to us from this dual character. This duality of light is described by the coexistence of the corpuscular and wave theories of light. As it is perfectly quoted in the book [1H1.1] by O.H. Blackwood and others: "General Physics", 4th edition, John Wiley & Sons, Inc., 1973 page 665, **"Physicists have been jokingly accused of believing in light waves on Mondays, Wednesdays, and Fridays and in photons on Tuesdays, Thursdays, and Saturdays"**. {My own observation adds to this that "on Sundays in churches physicists display the complete negation of statements, which their own physics is making to-date".} Of course, not only the light shows such a duality. For example, the theory on the "wave particle duality of nature" states, that this duality is also displayed by elementary particles, and practically by all matter.

The greatest number of well-camouflaged evidence for the existence of the counter-world is contained in textbooks of physics. Let us indicate here at least a single example of such evidence. People who know physics are tripping over it during studies of electromagnetic waves. Namely, as the reader probably knows, all waves that exist in the entire universe subdivide into two major categories, namely the so-called "transverse waves" and the "compression or longitudinal waves". The transverse waves are created exclusively on the border of two media - e.g. we can frequently see them on the surface of the sea, or on the surface of a waving flag. In turn inside of a given medium exclusively compression or longitudinal waves can propagate. However, **electromagnetic waves** display all attributes of transverse waves. This means, that they must

propagate along the border of two worlds - i.e. "our world" and the "counter world". So if the counter-world would NOT exist, it would be impossible to create transverse electromagnetic waves.

One of the most spectacular pieces of evidence for the correctness of the Concept of Dipolar Gravity, which is already known by human science for a long time, is this **red shift** of the light of distant stars observed from the Earth. It is the same "red shift" which the opponents of the Concept of Dipolar Gravity quote as their "crown argument" for the supposed "escape of galaxies" and for the "expansion of the universe". Because of this contradictive situation, that the same "red shift" is presently considered to be a piece of evidence for the correctness of two mutually contradictive scientific theories, it is going to be discussed more comprehensively in a separate (next) item #D2 of this web page.

Of course, in addition to evidence on the correctness of the Concept of Dipolar Gravity listed above, volumes 4 and 5 of my newest [monograph \[1/5\]](#) present a whole ocean of further evidence. In order to name here at least some of them, they include so-called "extraction glow" emitted during telekinetic motion (see "Fig. #1"), ESP and animal instinct - means the fact of communication of people and animals with this thinking substance from the counter-world, actual existence of phenomena of telekinesis and telepathy, etc., etc. In order to learn all these evidence, best is to read the entire [monograph \[1/5\]](#). or at least read subsections H1.1, H5.3, I3.3, and I7 from its volumes 4 and 5.

## #D2. The "red shift" in light of distant stars is the most noticeable scientific evidence for the correctness of the Concept of Dipolar Gravity:

I wonder whether the reader have ever noticed the apparent differences between behaviours of the waves on a river depending whether these waves move along the powerful current of the river, or opposite to the direction of the current of water. Although the real parameters of these waves on a fast flowing river do not change, their so-called "apparent parameters" become different. After all, on these waves a phenomenon acts in such a case, which is easy to check by everyone, and which produces quite similar outcomes to outcomes of the "Doppler Effect" - although this phenomenon has nothing to do with the Doppler Effect. Namely, **all waves which move along the medium that is in the state of motion with the speed similar to the speed of the propagation of these waves, change their speed of propagation in relationship to a motionless observer in a manner which is proportional to the vectorial difference of speed of this medium in relationship to the vectorial speed of these waves.** In turn this change of the speed of waves in relationship to a motionless observer, causes that this observer perceives them as "apparent waves" of deformed parameters, means waves which are just like a "model" or a "picture" of

real waves, and thus which have changed length and frequency in relationship to the real waves. The above phenomenon is widely known on empirical principles. However, in spite that I intensely searched the name and description of this phenomenon in textbooks of physics, as so-far I have not found this name (perhaps it awaits until it will be able to be called the "Pajak's Wave Effect"). Of course, the phenomenon described above clearly differs from the Doppler Effect. After all, the Doppler Effect assumes that the speed of light (or other analyzed waves) remains unchanged no matter what is the speed of the medium in which this light (or other analyzed waves) propagates. Therefore the Doppler Effect relates exclusively to cases when the source of waves is moving, while both the medium in which these waves propagate, as well as the observer, remain motionless, and thus when the motionless observer sees the "real waves". In turn **the phenomenon described here takes place when the source of waves is motionless, while the waves propagate along a medium that is in motion in relationship to the motionless observer, and thus when the speed of these waves is subjected to an apparent change and therefore the motionless observer sees the "apparent waves" which display "deformed parameters" in relationship to parameters of the real waves.**

At this point I should emphasize, that because of this major difference of the phenomenon described here and the Doppler Effect, their perception by the motionless observer is also completely different. Namely, in the Doppler Effect the motionless observer sees the real waves. Thus to whatever he sees the same description and the same model of reality applies, as to these real waves. For example, both, what the observer sees and the real waves can be described by the same equations. In turn in the phenomenon described here, the motionless observer sees "apparent waves" - means like a different scale model or picture of the real waves. Thus the relationship between these real waves and these observed "apparent waves" are like relationship between a specific phenomenon, and a model of this phenomenon completed in a different dimensional scale and in different conditions. Therefore for example equations which describe real waves lose their validity for the description of such "apparent waves".

The phenomenon described in this item in a best way is known to "surfers" who ride on sea waves. This is because it is a source of extraordinary phenomenon of "slowed-down waves" which in English are called the **bore waves**. Such bore waves appear only in a few sparse areas in the world. In these areas a combination of parameters and configurations required for the creation of such waves must exist, such as the funnel-shaped river outlet, the correct speed of the river current, the required depth of water, the appropriate force and amplitude of the sea tide which propels these waves, etc. These "slowed-down waves" always have the deformed parameters in relationship to the natural waves. For example, they move much slower than the natural waves, sometimes even standing still in their motion (i.e. they significantly slow-down their frequency). Simultaneously their length becomes shorter from the length of natural waves. Sometimes they become so short, that several of them superimposes on each other, thus forming a single huge "super-wave". Their behaviour does NOT fulfil the known equations for the wavy motion. If they would be waves of light, not waves of water, their observer would see them as clearly

"shifted towards red". These waves always appear in areas where the sea waves enter a river outlet and move opposite to the current of water. Such "slowed-down waves" are formed only in several areas of the world, and usually only once or twice a year - when the required combination of conditions appears in there. The most well known areas where these waves appear include: the outlet of the Amazon river (locally these waves are called there the "pororoca"), Hangzhou harbor in China (locally known as "Silver Dragon"), Solway Firth w Scotland, Bay of Fundy in Canada.

One of the most interesting practical applications of the phenomenon described above, is to provide the explanation for the mechanism that causes so-called "red shift" in the light from distant stars observed from the Earth, and also the mechanism which causes the "shift towards blue" of the white light that falls on a given (e.g. our) planet and is observed from the surface of this planet. This explanation results from the definition of the "gravity field" provided by the Concept of Dipolar Gravity and described in item #G2 below. According to this definition, almost everything in our universe, including light into this number, is a kind of natural programs which have the ability to move according to the pre-programmed "laws". In turn the kind of a force field similar to friction, that is formed during the motion of these programs, is just called the "gravity field".

So let us explain more comprehensively this definition of gravity field provided by the Concept of Dipolar Gravity. According to it, the gravity field is simply a kind of "friction forces" formed by the flow of a whole range of natural programs which concentrically fall down from the cosmic space onto a given heavenly body, then move towards the centre of gravity of this body, to finally pass in this centre of gravity to the other world called the "counter-world". (The existence of the counter-world is formally proven in item #D3 below.) In the result of this continuous flow of natural programs, light (note that "light" is also one amongst such natural programs) in the vicinity of heavenly bodies always moves in the fast flowing stream of these programs. Therefore, if this light falls from the cosmos onto the surface of a given heavenly body (e.g. onto our planet), it is going to move "along the current" of this stream of flowing programs. Its speed thus must show then the apparent increase in relationship to a motionless observer from the surface of this planet. In turn this apparent increase of speed in relationship to a motionless observer is going to cause, that the observer will see it in the form of an "apparent light" - means the light which "deformed" its parameters through apparent extending its wavelength, but simultaneously increasing its frequency. This in turn is going to be manifested in eyes of this observer as a "blue shift" of this light (means the shift of the color of this light towards a blue color). If in turn light is going to emerge from a heavenly body, e.g. from a distant star, then it will be moving "opposite to the current" of this stream of natural programs. So it then is going to show an apparent slowing down its speed in relationship to a motionless observer. In turn this apparent slowing down of its speed is to cause, that the motionless observer is going to see it as an "apparent light" - means the light that "deformed " its parameters through apparent shortening its wavelength but simultaneous apparent shortening (slowing down) also its frequency. This in turn will manifest itself in eyes of a motionless observer as a "red shift" of this light (i.e. the shift of color of this light towards a red color).

## #D2.1. Why the "red shift" confirms the correctness of the Concept of Dipolar Gravity and contradicts the correctness of the "theory of the expanding universe":

*Motto: "Although the same phenomenon can be claimed a 'proof' by both sides which argue with each other, in fact always are attributes present in it which contradict one of these sides."*

It is a public secret that this "red shift" of the light from distant stars becomes a key argument for adherers of the so-called "theory of the expanding universe". However, because the theory described here and called the Concept of Dipolar Gravity states an exact reversal of whatever claim the adherers of the "theory of the expanding universe", the same phenomenon of the "red shift" in reality cannot simultaneously support the truth of both these contradictory theories. Thus there must be some overlooked facts, and also various experiments which can be completed, and which are going to support the correctness only one out of these two contradictory theories, simultaneously certifying against the correctness of the other one. According to my own research, the following facts which are overlooked by adherers of the "theory of the expanding universe" deny the correctness of this theory, but simultaneously confirm the correctness of the Concept of Dipolar Gravity described here:

**(i) All stars and galaxies display the "red shift", while if the universe really expanded, a significant proportion of them should display a "blue shift".** The point is, that this "red shift" could be observed from the Earth in all stars only in case when the Earth is located in the exact centre of the universe (i.e. in the zero point). However, the Earth is located on peripherals of the universe. Thus in case of correctness of the "theory of the expanding universe" only a part of stars and galaxies should indicate the "red shift", while the remaining stars and galaxies should indicate a "blue shift".

**(ii) Apart from this "red shift" there are no other facts that would support the correctness of the "theory of the expanding universe", while there is a wealth of evidence for the correctness of the Concept of Dipolar Gravity described here - and with it for the fact that the universe does NOT expand at all.** An example of just such evidence is the fact described before that the "sky is blue", although the earth's atmosphere does NOT "implode" at all - means does NOT shrink in the direction opposite to the direction of supposed expansion of the universe. Thus there must be another reason, unconnected to the Doppler Effect, which causes this tendency in shifts of colors. The physics tries to explain clumsily the "blue sky" as a result of the phenomenon which is completely different than the "blue shift". Of course, it conveniently forgets then to check experimentally, that the "red shift" of the light of stars in fact displays mirror attributes to this "blue shift" of the blue light from daylight sky.

**(iii) Electromagnetic waves belong to the category of so-called "transverse waves" (as explained in item #D3 below) - exactly the same as waves on water. Thus all phenomena which occur in waves of water must also appear in electromagnetic waves, and vice versa.** Expressing this in

other words, the fact that the phenomenon taking the form of the so-called "bore waves" of water (described in the previous item #D2) illustrates the watery equivalent for the "red shift" in light from distant stars, means that the present scientific explanation for this "red shift" is entirely wrong. Thus according to the DeBroglie's Principle of the Symmetry of Nature, this "red shift" of the light from stars is NOT caused by the Doppler Effect of the escaping galaxies, but by an ordinary motion of electromagnetic waves "upstream" of gravity fields of their own stars.

\* \* \*

Independently from the above facts, which are directly linked to the "red shift" discussed in item #D2, also various other facts certify for the absurdity of the "theory of the expanding universe". Let us list here at least most vital out of these other facts.

**(iv) The configuration of the universe does NOT correspond to the known explosive configurations.** Explaining this in other words, the universe is filled up with matter in a "planned" manner" - means as if someone intelligent (God) on purpose distributed all the matter in a most beneficial manner. In turn if the universe originated from a "big bang" - as the adherers of the "theory of the expanding universe" claim, then it would need to display the configuration which is characteristic for an explosion. For example, instead of having all the masses distributed in an intelligent and approximately even manner, it would have a whole mass clustered on peripherals. In fact, if we even assume the phenomenon of the "expansion of the universe" did occur, then for the configuration of the physical world that is already recognized by human science, the mass of this universe would need to continually flow out of a source, or more correctly from a number of sources. In turn such a continuous inflow of matter is contradictive to the principles of "explosion". In turn without an "explosion" which would give the initial motion to masses, the universe would NOT be able to expand. Summarizing, the configuration of the universe and the distribution of masses in it, suggest that our physical world (this visible one) was created intelligently, and has NOT originated from an explosion.

**(v) The theory of the "big bang" and the expanding universe contradicts other physical theories.** For example, in the time of the "big bang" the speed of the flow of matter would suppose to exceed the speed of light. But other theory (that of Albert Einstein) states that supposedly the speed of light cannot be exceeded - because the mass of matter then increases infinitely. In turn we know that the matter of infinitely large mass no explosion would be able to neither move nor accelerate. Means that we have a physical paradox here, which can be solved only if physicists begin to assume in their speculations various unbelievable and unrealistic assumptions. And all this improbable gymnastics and accepting unrealistic assumptions is just to avoid the statement that after all **God** does exist and God created the physical world - as this is described and supported with numerous evidence in item #14 of this web page, and in a separate web page about **evolution** (some matters linked to the creation of the world and man by God are also discussed on the web page about **time vehicles**).

To summarize this item, the noisily promoted "theory" about the existence of the "big bang" and about the "expansion of the physical world", turns out to be

just a big "nonsense on wheels", with which some fatalistic individuals try to scare people and divert the attention of humanity from the existence of God and from the researching how God really created the physical world (see item #14 of this web page).

### **#D3. A formal scientific proof of totalizm that the counter-world does exist, formulated according to principles of mathematical logic:**

The first formal scientific proof for the existence of the counter-world was published in subsections H1.1 to H1.1.3 from volume 4 of scientific monograph [1/4] "Advanced magnetic devices" in 2000 (means quite a long ago). In fact this proof was repeated three times in the indicated subsections, each time completed with a different physical methodology of scientific proving. This in turn illustrates that the scientific proving of so obvious matter as the existence of the counter-world, can be carried out not just on one, but on many entirely different ways. The scientific proof that "counter-world does exist" is quite important. It confirms scientifically facts which are explained to us by religions for thousands of years. Namely, it proves that this another world, popularly called the "other world" (e.g. consider the saying "they send him to the other world"), or "afterworld" (e.g. consider the saying "he shifted to the afterworld"), in fact does exist in an objective manner. In turn this objective existence of this world can be confirmed in a scientific manner. From this in turn is just a small step away from the scientific proving, that whatever religions and folklore claim about God living in this other world, and about us going in there after our death, is also an objective truth and can be confirmed objectively with scientific methods. The scientific proof that "counter-world does exist" is for us equally binding as all other scientific proofs - for example as the proofs that the Earth is spherical, or that sides of a right-angled triangle fulfill the Pythagoras equation. For our own good we should rely on indications resulting from this proof in everything that we do. After all, if we do not consider it, then we are to stick to views and undertake actions which run against truth - means which contradict the true operation of the counter-world and the universe. In turn thinking and acting contradictively to the truth and to reality, inevitably brings not very pleasant consequences to us. In turn if we consider in our lives indications resulting from this proof, then in almost everything that we do, we are inclined to make corrections for the existence and influence of the counter-world on our lives and on the world around us. This in turn is the key to us reaping fruits and rewards in the future, which await for these who learned the truth and who recognize it.

During my professorship at a Korean University in 2007, by some strange act of God in the second semester which coincided with the update of the fifth edition of my most important monograph [1/5], I was granted the privilege of

giving a series of lectures concerning the mathematical logic. A "by product" of these lectures was that to three previous versions of the formal proof for the existence of the counter-world completed before with the use of physical methods, I could add another version of the formal scientific proof for the existence of the counter-world which this time is completed with the use of methods of mathematical logic. Because this proof is short, I am quoting it below for the use of these readers who would like to get familiar with it, or wish to check the validity of it. However, I would still encourage to reach for further information regarding it, which is provided in subsection H1.1.4 from volume 4 of the newest [monograph \[1/5\]](#). The base propositions of the above proof for the existence of counter-world stem from attributes of so-called "transverse waves" - the more extensive description of which is provided in previous items of this web page about the [Concept of Dipolar Gravity](#) - see items #D1, #D2, #D2.1 above. But in order to save the reader reading these other descriptions, I remind here briefly that **every wave is simply a moving oscillation**. Thus in every wave two directions of motion are coexisting, namely the main direction in which a given wave moves, and also the main direction in which occurs the oscillatory motion that forms this wave. The "transverse waves" are simply such waves in which the main direction of a given oscillatory motion is perpendicular to the direction into which the entire wave moves. Most common examples of "transverse waves" are waves on water. The "transverse waves" must be clearly distinguished from the so-called "longitudinal waves" in which both above componential directions of motion occur along the same line. A most common example of longitudinal waves is probably a home toy in which steel balls hang on strings in a row, like pendulums, touching each other sideways. When we lift a first of these steel balls and provide it with a pendulum motion, then with the use this longitudinal wave this pendulum motion is transferred onto the last ball, which repeats it, then then the motion is transferred back onto the first steel ball, etc. So here it is, the entire formal proof for the existence of the counter-world, completed with the use of methods of mathematical logic:

**Theorem:**

*"The counter-world does exist".*

**Basis propositions:**

(1) *The electromagnetic waves display all attributes of the so-called "transverse waves", and according to the present knowledge the electromagnetic waves must propagate in exactly the same manner as all known to us kinds of transverse waves do propagate. All known kinds of transverse waves propagate exclusively along the border between two mediums.*

(2) *The belonging of electromagnetic waves to the category of transverse waves which propagate along the border between two mediums means that in the space which these waves cross must either exist a border of some sort between two mediums which occupy our physical world, or must exist a border which remains invisible to our senses and undetectable to our instruments and which separates our physical world and the counter-world (the counter-world also remaining inaccessible for us and undetectable for our instruments) - each of these two worlds being filled up with a different medium. The fact that electromagnetic waves propagate across space in which our advanced physical instruments nor excellently provided and well paid scientific laboratories are*

*unable to detect neither the existence of two different mediums, nor detect the existence of a border between two different mediums, eliminates completely the possibility that electromagnetic waves could propagate along a border between two different mediums that fill up our physical world.*

(Explanation complementing this set (2) of premises: The cross-volume propagation of electromagnetic waves researched by our science, occurring through the space which for our measurement instruments appear as filled up with an uniform medium, combined with simultaneous behaviour of these waves as if they propagate along the border of two different mediums, may only then take place, when these waves propagate along the surface of two different worlds, means along the border of our physical world, and some other world which remains inaccessible to our senses and undetectable to our instruments, and which is filled up with a different medium than our physical world. Since this other world had no scientific name so-far, the Concept of Dipolar Gravity which discovered and described it, named it the "counter-world".)

*(3) The counter-world does NOT exist, or does exist. The propagation of electromagnetic waves along the border between our physical world and this counter-world eliminates completely the possibility that the counter-world does NOT exist.*

**Proof:**

*(1) The first basis proposition is to be transformed with the use of tautological form of the method known under the name of "hypothetical syllogism". This form can be written as  $[(p \Rightarrow q) \ \&\& \ (q \Rightarrow r)] \Rightarrow [p \Rightarrow r]$ , in which the assertion "p" says "the electromagnetic waves display all attributes of the so-called transverse waves", while the assertion "q" says "according to the present knowledge electromagnetic waves must propagate in exactly the same manner as all known to us kinds of transverse waves do propagate", in turn the assertion "r" states "all known kinds of transverse waves propagate exclusively along the border between two mediums". The transformation of these propositions implies the conclusion that "the electromagnetic waves propagate exclusively along the border between two mediums".*

*(2) Accepting this previous conclusion for an assertion in the next phase of inference, and using the method of "disjunctive syllogism", the tautological form of which can be written as:  $[(p \ || \ q) \ \&\& \ !p] \Rightarrow q$ , we obtain a next conclusion which states that "the electromagnetic waves must propagate along the border between our physical world and the counter-world."*

*(3) The last couple of propositions allows us to derive the final conclusion with method called the "disjunctive syllogism", the tautological form of which can be written as:  $[(p \ || \ q) \ \&\& \ !p] \Rightarrow q$ . In this form the assertion "p" says "the counter-world does NOT exist", while assertion "q" states "the counter-world does exist". Thus the final conclusion states "the counter-world does exist"!*

**Conclusion:**

*The above inference chain unambiguously and conclusively proves the truth of the theorem that "the counter-world does exist".*

\* \* \*

For the use of these readers who are NOT familiar with the notation that is applied in the above proof, I would like to explain that symbols "p", "q", and "r" mark subsequent "assertions" utilized in this proof as logical variables. In turn

symbols "&&", "||", and "=>" mark logical operators "and", "inclusive or", and "implies" (if ... => then ...").

It is also worth to mention about the validity of the above proof. Because this proof utilizes exclusively tautological forms of subsequent methods, it remains valid for all values of variables it uses. Thus practically it is error-proof. If someone would like to undermine it, he or she would need to undermine first the validity of mathematical logic. In turn this logic is a foundation for countless mathematical proofs which with a large success were used by the effective and precise discipline of mathematics. Thus, since so strong proof for the existence of counter-world finally we were able to develop, it is worth to check now whether we live according to this proof. After all, the guesses to-date about the existence of the counter-world this proof replaces with the reliable knowledge and certainty of the existence of counter-world.

At this point I would like to appeal to other lecturers of logic. Namely, I propose to take notice of the lack of meaning, motivation, and the absence of engagement in examples of proofs presented in textbooks of logic - as an example consider the textbook proof "modus ponens" of the kind, quote: "*Samson is strong*", and "*If Samson is strong, then it will take a woman to do him in.*" We can conclude "*It will take a woman to do Samson in.*" (End of quote.) So instead in our lectures we use such examples deprived of actuality and sense, I would rather suggest for example of proofs use e.g. the proof explained above, or the proof indicated below. After all, these proofs are to inspire students to thinking and to searches for truth, give more sense to their lives, will be agreeable with indications of our conscience, and in a non-imposing manner are going to add our own contribution to the fight for the prevalence of truth.

The proving procedure presented above was also utilized in several other formal scientific proofs developed for the first time in the world by the author of this web page, and listed (and linked) in item #G3 from the web page named [god\\_proof.htm](#). All these proofs are extremely important for each one of us, as they repair the ignorance and misinformation disseminated so-far by the old official "atheistic orthodox science" (i.e. by this monopolistic science, which erroneous claims we still must learn in schools and at universities, and which immoral practices are disclosed more comprehensively in items #C1 to #C6 from the totaliztic web page named [telekinetics.htm](#)).

An example of an immense importance of all these formal scientific proofs developed by the author of this web page is the fact, that one amongst them is the formal proof that **God exists**. It was completed with several different proving methods utilised by present science. One amongst these formal scientific proofs for the existence of God, completed with the use of methods of mathematical logic, is presented in item #B3 of a separate web page [god.htm - about the secular and scientific understanding of God](#) in item #G2 from the web page named [god\\_proof.htm](#), as well as in subsection I3.3.4 from volume 5 of my newest [monograph \[1/5\]](#). The same procedure allowed to formulate also the formal proof that **God created the couple of first people** - the appropriate formal proof is presented in item #B8 of the web page about [evolution](#) and in subsection NF9 from volume 12 of my newest [monograph \[1/5\]](#). Finally the same procedure allowed also to prove that **people have eternal soul** - the

appropriate proof is presented in item #G2 of the web page named [soul\\_proof.htm](#) and in item #C1.1 of the web page named [nirvana.htm](#) as well as in subsection I5.2.1 from volume 5 of my newest [monograph \[1/5\]](#).

---

## **Part #E: In what manner the Concept of Dipolar Gravity provides a key for understanding the spiritual world:**

### **#E1. The second body which we have, moral energy, feelings, nirvana, depression, acupuncture, morality, moral laws, totalizm, parasitism, etc.:**

Let us explain now the most vital details regarding this mysterious "counter-world", which contains the software part of our universe. We actually hear about this counter-world from our religions. Except that being formed thousands of years ago, religions are unable to explain it with present terminology and modern ideas. Religions call the counter-world with different names, e.g. as this "other world", "second world", or "world of souls and spirits", etc. It is this counter-world where our souls are kept and where we go after our death. Fortunately for us, the Concept of Dipolar Gravity can already explain much more about this other world than religions could. This concept proves that the gravity field is actually a dipolar dynamic field, quite similar to magnetic field, meaning a field that has two poles: an inlet "I" and outlet "O". But because gravity field is concentric, in our world we can only see the inlet "I" pole. The second pole "O" of gravity disappears from our world behind an impenetrable barrier and emerges in a different world that is parallel to the our one. This other "counter-world" is also filled out with appropriate substance named "counter-matter". The substance named "counter-matter" forms in the counter-world exact duplicates of objects existing in our world. In fact, every object that exists in our world, in this counter-world has an exact replica of itself. For the philosophy of totalizm this exact replica of our physical bodies contained in the counter-world carries a very special significance. Totalizm calls this replica a **counter-body**. (Religions call it a "phantom", a "spirit", or a "ghost", while the so-called "alternative sciences" usually refer to it as to "astral body", "energy body", "aura", etc.)

The fact that we have a second body, by the Concept of Dipolar Gravity called the "counter-body", introduces a whole series of interesting consequences. The most fundamental out of these is that our physical body from this world continually exchanges a kind of intelligent energy with the counter-body

contained in the counter-world. This energy is called the **moral energy**. This particular name was assigned to it for an important reason. Namely, the moral energy is generated by us only when we carry out some morally correct actions (i.e. actions which by religions are called "good deeds"). Interesting, that moral energy was NOT known so far to human science, although the action of it hits our eyes in a huge number of situations. When moral energy flows between our physical body and the counter-body, the flow of it generates in us specific sensations. These sensations are called **feelings**. Thus the Concept of Dipolar Gravity defines feelings as sensations experienced during the flow of moral energy between our physical body and the counter-body. Generally speaking, all pleasurable feelings are formed when this moral energy flows out from our counter-body and enters the physical body. In turn all unpleasant feelings which we usually do not like, e.g. effort, tiredness, or hunger, are formed when our physical body with an effort pumps back this moral energy into the counter-body. If our counter-body experiences the lack of moral energy, then we are overtaken by the feeling of **depression**. In turn if our counter body accumulated an excess of this moral energy, then the energy is spontaneously escaping to our physical body, which situation we experience as the feeling of indescribable sensation of happiness called **nirvana**. Moral energy flows between physical body and the counter-body (or in case of the planet Earth and other material objects - between these objects and their counter-material duplicates) through special "valves"-like organs which philosophies of the East call **chakras**. In turn within our body and counter-body it flows along special "pipelines" - which by the acupuncture are called **meridians**. The attribute of these meridians is, however, that various illnesses cause local blockages in them. These blockages can be removed on several different manners, one of which is **acupuncture**. Therefore the Concept of Dipolar Gravity explains acupuncture as a skill of elimination of blockages in flows of moral energy through these meridians. Of course, all where there is any form of energy, there are also laws which rule the behaviour and flow of this energy. In case of "moral energy" laws which rule it are called the **moral laws**. As this item reveals it, these moral laws exert a direct influence on our feelings, wellbeing, health, etc. So in order to feel good in our life, we must learn to obey these moral laws. Therefore formed was a special philosophy called **totalizm**, which teaches us how to obey these "moral laws" in all our actions, and thus how to live a happy, fulfilled, peaceful, and healthy lives. The only principle of this philosophy states that "**in everything that you do pedantically obey moral laws**". Translating this into a simpler language, the only principle of totalizm states that in every our activity we must act in a manner which is moral, means which does NOT break any amongst moral laws. It is worth to notice, that in present times another philosophy of everyday life escalated throughout the world, which represents an exact reversal of totalizm. This another philosophy is called "**parasitism**" by the Concept of Dipolar Gravity, because people who practice it lead lives of intelligent parasites. The main doctrine of the philosophy of parasitism states "obey only these laws and requirements which you are forced somehow to obey".

More information about moral energy, mechanism of feelings, work of acupuncture, manner of earning the nirvana, etc., etc., is provided in monograph [1/5]. For example see subsections: I4.3 (and also JG3.7 and OA8.6.3) from

volumes respectively 5, 8 and 13 - for descriptions of moral energy, I5.5 and I5.6 from volume 5 - for description of feelings and acupuncture, OA8.6.3 and JG4.1 from volumes respectively 13 and 8 - for the description of depression, JE1 to JE9 from volume 8 - for the description of nirvana, I4.1, JA1, JA2.5 from volumes respectively 5 and 6 - for descriptions of moral laws, or the entire volume 6 - for descriptions of the philosophy of totalizm.

## #E2. Intelligent counter-world:

The substance called "counter-matter", which prevails in this parallel "counter-world", as well as all objects formed from it including our counter-bodies, display properties which are exactly opposite to properties to our "matter" and our physical bodies. For example, our matter displays mass, inertia, and friction. Therefore counter-matter is weightless, has no inertia, and produces no friction. But the most important for us turn out to be the intellectual attributes of our matter and this counter-matter. Namely our matter is "stupid" in the natural state. Therefore the counter-matter must be opposite to stupid, means must be "intelligent" in the natural state. This practically means that the entire ocean of counter-matter which is contained in the counter-world displays all properties which we know as carriers of intelligence. For example counter-matter in the natural state can gather information, can store or memorise information, retrieve information, and think. Practically this means that the entire counter-world is like one huge computer. It can create computer-like programs, and it also can run these programs. One type amongst numerous such programs created and stored in the counter-world, are programs of various laws of nature, including programs of moral laws. Of course, there is a wealth of evidence that the counter-world does exist and that it is intelligent. Several examples of this evidence are discussed on the web site [telekinesis.htm](http://telekinesis.htm).

Further descriptions of the Concept of Dipolar Gravity, including various evidence and a formal logical proof for the existence and intelligence of the counter-world, are provided in volumes 4 and 5 of monograph [1/5] "Advanced Magnetic Devices", and in volumes 6 and 7 of monograph [8] "Totalizm" - both these publications are available free of charge via this web site. Because it does not take a lot of time to review these two volumes, while they open our eyes on many phenomena which previously remained unexplained, I am inviting you to have a look at them.

## #E3. The thinking counter-matter, means God:

As this was explained above, the Concept of Dipolar Gravity assigns the name "counter-matter" to the intelligent substance that prevails in this other world

called the "counter-world". This extraordinary substance is weightless and does not create friction. Thus it is a kind of enormously runny liquid (e.g. is slightly similar to water). The most extraordinary attribute of this substance from the counter-world is that it is intelligent in the natural state. This means that it has the ability of self-learning. Also it is able to accumulate and to store programs and data, as well as to think like a computer. Thus in fact this counter-matter is like a kind of "liquid computer" which not only thinks, and not only runs programs which are stored in it, but which also can assume any shapes and any behaviours, that the result of this thinking orders to it. The shocking consequence of the entire other world being filled up with such thinking substance is, that actually this intelligent other world is what religions call **God**. Thus the Concept of Dipolar Gravity is the first consistent scientific theory which was able to formulate the formal proof that God does exist. This **formal scientific proof for the existence of God** is presented in subsection I3.3 from volume 5 of monograph [1/5], and also in subsection K3.3 from volume 6 of monograph [8]. It is also discussed on a separate web site devoted to the [secular and scientific understanding of God](#) which results from the Concept of Dipolar Gravity. Of course, independently from this formal scientific proof, for the existence of God certifies a huge body of evidence. For example, the so-called ESP, or cases of receiving replies to inquiries via divining pendulums, are actually manifestations of communication between humans and this thinking substance from the counter-world.

In light of the above it becomes quite clear how the Concept of Dipolar Gravity defines God. According to this definition, **God is the intelligent, self-learning, and moveable substance called "counter-matter", together with a system of self-aware natural programs which are contained in this substance and which control the behaviour of it**. To explain the same in simpler words, "God is a kind of liquid computer of the size of entire world, together with a system of natural programs which control this liquid computer". Of course, from present computers we know, that a computer is composed of several basic components, i.e. hardware, software, and peripherals. Similarly is with God. This fact is emphasised for a long time by Christian religion. The religion informs us that God is in fact three basic components, namely God Father (i.e. the "hardware" - means the entire counter-matter), Holy Ghost (i.e. the "software" - by the Concept of Dipolar Gravity called the "universal intellect"), and the "God Son" (i.e. a kind of "peripherals" purposely made from the special kind of hardware and software - for details see "Part #1" of this web page). For more information about these three basic components of God see also a separate web page about the [secular and scientific understanding of God](#).

The **theory of everything** described here and called the "Concept of Dipolar Gravity" not only defines God and scientifically explains what actually God is, but it also provides us with tools for formal proving the existence of God. Because this formal scientific proof for the existence of God is so immensely important for each one of us, the completion, interpretation, and photographic illustration of it is published on a separate web page [god proof.htm - about formal scientific proof that "God does exist"](#). I highly recommend having a look at that web page. The same proof for the existence of God completed with methods of mathematical logic is also published in subsection I3.3.4 from volume 5 of the newest [monograph \[1/5\]](#).

## #E4. We were created by God, although with the use of intelligently controlled evolution:

People have truly compartmental minds completely deprived of elasticity. For example, in matter of the origins of man, people subdivided themselves into two basic camps, which mutually fight views of the opposite camp. The first out of these camps takes literally words of the Bible and believes that the world and people were created by God in 6 days. (In 7th day God rested.) The second camp claims that man was created as the outcome of a series of uncoordinated random events which completely by accident composed the process of "natural evolution".

In turn findings of the Concept of Dipolar Gravity described on this web page, reveal that both these camps are partially right and partially wrong. Namely, according to these findings, purely accidental evolution in fact did exist. But the outcome of it was the origin of God, not man. The evolution of God was much easier than the evolution of man. After all, God evolved as a self-aware program appearing in a self-learning and already existing liquid computer. Only then this God created man. In this creation of man God utilised the method of "intelligently controlled evolution", which was very similar to natural evolution. More information on this subject is contained in "Part #1" below this web page, and also on a separate web page entirely devoted to the subject of the evolution of man.

---

## Part #F: Purely physical (hardware) phenomena occurring in counter-matter and explained by the Concept of Dipolar Gravity:

### #F1. Telepathy:

The substance which prevails in our physical world, means so-called "matter", displays the tendency to fall into vibrations. These vibrations in the large part of their spectrum are perceived by our senses as so-called "sounds". But if parallel to our world there is a whole huge other world filled up with extraordinary substance called "counter-matter", then this other substance also must display tendency to fall into vibrations similar to sounds from our world. In turn our

counter-material duplicates are able to utilise these vibrations for forming a kind of "speech" with the use of which they communicate in the counter-world. It is this kind of "speech" propagated through vibrations of counter-matter that we call "**telepathy**". More information on telepathy is contained in subsection H7.1 from volume 4 of my newest [monograph \[1/5\]](#). On the subject of telepathy there is also a separate web page entitled [telepathy](#).

## #F2. Permanent telekinetisation:

In item #B3 of this web page was explained, that an extraordinary telekinetic motion always takes place when a physical object is "pulled" by its own counter-material duplicate. In turn item #E1 of this web page stresses that every physical object which exists in our world is linked by gravity forces with its own counter-material duplicate which exists in the counter-world. Both above pieces of information are of key importance for understanding of an unique phenomenon, which is called "permanent telekinetisation".

Permanent telekinetisation is a special kind of vibrations, which are maintained in some substances, or in their components. In these substances atoms vibrate in relation to their counter-material duplicates. Because of this, a part of the vibratory motion of these atoms is carried out on principles of physical motion, while another part - on principles of telekinetic motion. In the result, such permanently telekinetised substances are characterised by a whole range of attributes that usually are demonstrated during telekinetic motion. For example, they can emit extraction glow, their mass can decrease, they may show characteristics that are unique for superconductors, etc.

In some versions of permanent telekinetisation, substances that are subjected to it display healing attributes. These attributes are similar to ones which are obtained during acting with telekinetic field on living organisms. Thus in [healing](#) such substances are used as kinds of universal medicines helpful for every illness. Furthermore, some permanently telekinetised substances induce faster and richer growth. Thus e.g. water which is telekinetised by passing through the focal point of a pyramid was used for so-called "**telekinetic farming**" in past. It induced extremely rich harvests in any poor soil.

More information about permanent telekinetisation, and also about extraordinary attributes of permanently telekinetised substances, is presented in subsections H8.1 and KB1 from volumes respectively 4 and 9 of my newest [monograph \[1/5\]](#). In turn the "telekinetic farming" is described in subsection KB2 from volume 9 of my newest [monograph \[1/5\]](#).

---

**Part #G: Purely software induced phenomena manifested by counter-matter**

# and postulated by the Concept of Dipolar Gravity:

## #G1. Energy:

This **theory of everything** called the "Concept of Dipolar Gravity" states that the extraordinary substance which prevails in the counter-world displays attributes of present computer. Means, it is able to store and then run various natural programs. One kind of the most elementary natural programs which is continuously stored in this substance and which defines how this substance supposed to behave, is called "**energy**". But because the behaviour of counter-matter decides how matter from our world linked with counter-matter via gravity forces must behave, these elementary programs of energy define also the behaviour of matter from our world. So according to the Concept of Dipolar Gravity energy is simply a kind of most elementary natural programs contained in counter-matter, which define the behaviour of this counter-matter, and thus also define the behaviour of matter. More information which explains what energy is in the Concept of Dipolar Gravity, is presented in subsections H9.2 and H4.1 from volume 4 of my newest [monograph \[1/5\]](#).

At this point is should be added, that although human science proposed so-far several definitions of energy, in fact still this science is unable to explain what actually this energy is. In turn having NO explanation for the nature of energy, this science is also unable to describe exactly all attributes of energy. Therefore in reality whatever the present official science claims about energy itself, and about attributes of energy, is actually more a mythology, or wishes, than facts. In other words, all "laws" concerning energy which the present science disseminates, in fact are NOT worth of a proverbial "straw". Practically this also means, that in many matters concerning the generation and attributes of energy, the official human science still remains in a complete error. It is also hugely irresponsible of it, that without being able to even unambiguously explain the nature of energy, in its arrogance the science ignores or condemns a whole array of various phenomena and capabilities, e.g. the ones described on totaliztic web pages [eco\\_cars.htm - about designs and principles of operation of zero emission cars of the future](#) or [telekinetics.htm - about experimental research and development of telekinetic machines](#).

## #G2. Gravity:

The Concept of Dipolar Gravity states that everything in our universe which describes some sort of behaviour, actually is a kind of natural program which is stored in, and run by, counter-matter. Examples of such natural programs include energy (also moral energy), laws of nature (e.g. moral laws), time, thinking, etc.

These natural programs have the ability to move through counter-matter and matter. The Concept of Dipolar Gravity also states that all such natural programs which move through counter-matter (and also through matter from our world) form a phenomenon during this motion, which is quite similar to force field formed in our world during friction. We call "gravity" this kind of "forces of friction" formed during the motion of natural programs through the counter-matter. Thus **according to the Concept of Dipolar Gravity the name "gravity" is assigned to a kind of friction-like force field formed during circulation of various natural programs through the entire universe.** More extensive explanation what actually is "gravity" in the light of the Concept of Dipolar Gravity, is presented in subsections H9.3 and JG3.7.1 from volumes respectively 4 and 8 of my newest [monograph \[1/5\]](#).

### **#G3. How the nature of gravity explains the shape of the physical world:**

From the manner on which the phenomenon of gravity is created in the Concept of Dipolar Gravity, stems also the information as to what must be the shape of the physical world in which we live. As it turns out, the physical world in this concept is shaped like a very thin, flat pancake hovering inside of a gigantic "droplet" of counter-matter that forms the counter-world. This "pancake" of our world and the "droplet" of the counter-world are mutually separated with an invisible and impenetrable barrier that exists between our world and the counter-world. This thin "pancake" of our physical world is only one amongst three separate worlds which together constitute the entire universe. Means, this thin pancake is our world, the "droplet" of counter-matter in which it hovers is the counter-world, while in the memory of intelligent liquid of counter-matter, which forms both these worlds, is contained the third virtual world. Unfortunately, the flow of programs (energy, execution control) between our world and the counter-world, which produces gravity forces described earlier, causes that this thin like-pancake is not stretched flat - as we would expect that it would stretch on a saucer or on a frying pan. In reality gravity forces this pancake to wind up into ripples and zigzags, so that in some areas of space it even overlap over itself. In the result, this flat and thin physical world looks like a thin pancake extremely squashed and rolled in ripples and zigzags over itself. More information on the subject of the shape and appearance of the entire universe according to findings of the Concept of Dipolar Gravity is presented in subsection JG3.7.1 from volume 8 of my newest [monograph \[1/5\]](#). In turn the process of creation of the physical world by [God](#) is described below in item #14.

### **#G4. The software explanation for the elapse of human time in the Concept of**

# Dipolar Gravity (i.e. the "reversible software time" from our physical world, versus the "absolute time" from the counter-world):

*Motto: "Absolutely everything in the entire universe is only a manifestation of intelligent counter-matter and natural programs which reside in this counter-matter and which control behaviours of it."*

My discovery resulting from the Concept of Dipolar Gravity described here, which probably is to exert the greatest impact on the future of mankind, states that **in the entire physical world (means also on the Earth) prevail as many as two drastically different kinds of time**. The most extensive descriptions of both these kinds of time are presented, amongst others, in item #C4.1, as well as in the introduction and in items #A1, #C3 and #C4, from another my web page named [immortality.htm](#), while the most important consequences of their work on Earth are best discussed in item #C3 from the web page named [prophecies.htm](#). The first of these two times is the natural time of the universe. The new "**totaliztic science**" calls it the "**irreversible absolute time of the universe**". In turn, the old, monopolistic, "**atheistic orthodox science**" claims that it is the only time prevailed throughout the entire universe, and multiplies about it all kinds of unrealistic speculations. This natural absolute time elapses smoothly and much faster than the people's time. It cannot be reversed and even God is unable to control it. In this time currently lives only our God. But when God created our physical world, originally He programmed this world so that also everything else on Earth existed and lived in that natural, absolute time. Only later God experienced, that the irreversible nature of this time takes away from Him the control over what is happening in the world that He created. Therefore, after noting the utter ineffectiveness of His attempts to govern over the world which He created, God decided to destroy almost all then living creatures with the use of biblical Great Flood. A half way during this flood, God added (i.e. like "patched") to the physical world a newly pre-programmed and different kind of time, and then He reprogrammed the lives of those rare creatures whom He allowed to survive the deluge, to this another new time, artificially pre-programmed by Himself. However, in order to NOT destroy and NOT need to re-program again everything that He previously created and that He considered to be "good", all inanimate matter God still left ruled by the irreversible absolute time of the universe. Hence, to the aging on Earth accordingly to the elapse of this natural absolute time, still until today is subjected all inanimate matter, i.e. all rocks, fossils (including e.g. dinosaur bones and coal), metals, minerals, etc. That other time prevailing on Earth, i.e. the one artificially programmed by God, is NON-existing in nature. It elapses in short jumps, which everyone can see with the help of simple experiment described in item #D1 from the web page named [immortality.htm](#). This artificially created by God time of people and all other creatures, the new "totaliztic science" called the "**reversible software time**" -

because its passage can be reversed, among others, with devices of my invention named "**time vehicles**". Between any two jumps of this artificial "reversible software time" there is always a long pause - which makes that it elapses immeasurably slower than the natural absolute time of the universe. How much slower is its elapse, I of course do NOT have the conditions (nor funds) to measure, while until today apart from myself no other scientist in the world is carrying out such a research. In other words, all the achievements to-date of the new "totaliztic science" so-far are exclusively my personal scientific achievements, as this new "totaliztic science" still NOT yet been officially established and still has NO other scientists who would carry out research in accordance with its spirit, philosophy, and scientific foundations (i.e. according to the Concept of Dipolar Gravity). However, the information coming from God and contained in the Bible, which is discussed in item #C4.1 from my web page named [immortality.htm](#), states that **the elapse of artificially created "reversible software time" is about 365 thousands of times slower than the elapse of natural "irreversible absolute time of the universe" in which God lives**. Because of this slowness, if anyone remembers the exact appearance of rocks that he saw at least three years earlier, then during another viewing of these rocks he may note that they aged and eroded by the equivalent of more than a million of human years. So in case of soft rocks their erosion should be so significant, that it can be noticed even with the naked eye. It is also because of the slowness of the elapse of this "reversible software time" that scientists mistakenly believe that the fossilized bones of dinosaurs and coal are millions of human years older than people, and that people painted drawings on rocks of caves tens of thousands of human years before the creation of mankind by God only about 6000 human years ago.

The above discovery of the existence and work on Earth of as many as two drastically different kinds of time, became possible only because the Concept of Dipolar Gravity explained the time in which people live in a completely different (software) way than this time is explained by **the old "atheistic orthodox science"** (i.e. by this monopolistic, ignorant, erroneous, arrogant, and anti-God science, which is described in items #C1 to #C6 from the totaliztic web page named [telekinetics.htm](#)). The full description of this software explanation for time is provided in item #C3 from the separate web page about principles of overcoming deaths by people and accomplishing [immortal lives](#), and also in item #B2.1 from the separate web page about [time vehicles](#), as well as in item #C3 from the web page named [prophecies.htm](#). Here (below) is only summarised briefly the essence of it.

According to this software explanation, the **"reversible software time" which is experienced by all living creatures from the physical world (including people), is actually the flow of "execution control" through natural programs contained in the counter-matter**. In order to explain this in other words, counter-matter and natural programs contained in it are like a kind of "liquid computer" which in our physical world assumes shapes of everything that we see around ourselves. (About this "liquid computer" I already wrote in item #E3 above.) For example, our bodies, and also buildings, mountains, or entire planets, are made of just such separate "liquid computers" which assume these shapes. These computers are controlled by appropriate programs contained in

them (in item #C3 from the web page named [immortality.htm](#) called the "**omniplan**"), which command them what supposed to happen, which changes they supposed to endure, how fast they suppose to age, etc. Well, the jumpy motion of the execution control (i.e. like the motion of a "cursor" from our computers) through subsequent commands of these programs ("omniplan") is actually perceived by us and all creatures having DNA, as an elapse of "reversible software time". Thus, our human time is actually a kind of "software time", or a software simulation of the natural "irreversible absolute time of the universe".

The Concept of Dipolar Gravity states further, that some time after the creation of our physical world, i.e. exactly around a half of duration of the biblical Great Flood, the elapse of time in our "physical world" was intentionally so re-programmed by God, that God, and also all more technically advanced people, could control this elapse of time in any way they wish. (The description of the creation of our physical world is provided in item #I4 below.) For example, people can control the elapse of time through building special machines called [time vehicles](#). In order to reassure this control, the elapse of this "reversible software time", in which age e.g. humans, in the physical world was clearly separated from the elapse of natural "irreversible absolute time of the universe" (or "true time") that still prevails in the remaining two worlds of our three-world universe, i.e. in the "counter-world" (in which the indestructible counter-matter resides, which is in the state of continuous motion), and in the "virtual world" (in which the indestructible and timeless universal intellect resides, means which is the home for God - or more strictly the home for this component of God which the Christian religion calls [Holy Ghost](#).)

I explain now more accurately the above capability of shifting back in time in this "reversible software time", which in our physical world rules over the ageing of people and other creatures having DNA - but which do NOT rules over ageing of inanimate matter (e.g. rocks or fossils). As revealed to us the Concept of Dipolar Gravity described here, in fact, the universe has two drastically different kinds of time. One of these is the "**irreversible absolute time of the universe**" - means the time, the elapse of which affects God, while on Earth which rules over ageing of inanimate matter, means rocks, fossils (e.g. bones of dinosaurs, coal, etc.), minerals, etc. This absolute time elapses in a manner as present people on Earth believe that their time elapses. Means, when it already passes, God is unable to shift it back and to change anything that with Him (means with God) happened earlier. But for God this mechanical flow of absolute time of the universe has no larger significance. After all, God, counter-matter, and programs that God creates, all of them can exist infinitively. The only significance that this "irreversible absolute time of the universe" has for God, is that by being aware of its irreversible flow and consequences, God so programmed the physical world, that the "**reversible software time**" in which we live and which works in this physical world could be shifted backward or forward. (The process of creation of the physical world by God is described below in item #I4.) Therefore, some time after the creation of the physical world, or more strictly during the biblical Great Flood - as this is described in item #C4.1 from the web page named [immortality.htm](#), God so re-programmed it, that all affecting people "reversible software times" from the physical world (i.e. the past, presence, and future) do

exist in it simultaneously, in the form of so-called "timespace", also called "**omniplan**". An extensive descriptions of this "timespace", or "omniplan", are provided in items #C3, #C4, and #C4.1 from the abovementioned web page named [immortality.htm](#). In order to accommodate all these different "times", the "timespace" ("omniplan") is composed of many separate like "layers", each one of which represents a different time moment in the "reversible software time" from our physical world. For example, in separate layers of this "timespace" ("omniplan"), still at this moment exists, and works, our physical world in the form that it manifested itself e.g. in the year 1000 B.C. In another layer our physical world is already there which is going to manifest itself e.g. only in the year 2656 A.D. (i.e. in the year of probable "**the end of the world**" described in item #N1 from the web page [quake.htm](#)). So if someone knows how, then from the present moment such someone can shift to any selected one amongst any possible such times, through a simple crossing to another layer of this "timespace" ("omniplan"). Although these times (layers of "software time") from the physical world are also subjected to the action of the "absolute time" of the entire universe, this absolute time has no influence on them, as they do exist infinitively long. After all, counter-matter from which they are formed, as well as programs which provide them with the required form and attributes, exist infinitively. Since all time in this "timespace" do exist the entire future and the entire past of our physical world, then God, as well as all more intelligent creatures which populate the physical world, can travel in time both forward and backward - and improve it "iteratively". After all, this travelling in time is simply a travelling in various directions across this "timespace" ("omniplan") that always exists in its entirety.

The basis for the creation of the fully controllable elapse of this "reversible software time" in our physical world, is the existence of this so-called "**timespace**", or "**omniplan**". The "timespace", or "omniplan", is a kind of like a "software container or landscape" or a "software structure", separated from the rest of the universe, which the container, landscape, or structure in every moment of time contains all objects that ever existed, exist now, or will exist in the entire physical world and in all times which constitute this present physical world. As I am explaining this in item #C3 from the totaliztic web page named [immortality.htm](#), in the work and in design this software container or structure (i.e. "omniplan") resembles slightly the today's "control programs" from machine tools with numerical (computerised) control. Only that, people's insight to these objects of the entire timespace is limited to the capability to see just whatever was located in a given layer of timespace through which these people are just passing. This timespace is also timeless and indestructible - although it can be subjected to continuous reconfiguring (i.e. to movements of objects contained in it). In fact it has the same attributes as the counter-world and the virtual world. After such indestructible and fully defined timespace was pre-programmed by God, **the elapse of time of people and other creatures from our physical world, is defined as the "path of every object existing in our physical world across this timespace (omniplan), controlled by appropriate natural control programs"**. Thus the elapse of time in the Concept of Dipolar Gravity is comparable to someone's march through a landscape (where this "landscape" is just the "timespace" or "omniplan"). In normal cases, this march always can be

carried on one and the same direction only - which we call the direction of the elapse of time. But if someone gains an access to the control programs which manage this our passage through the timespace, then such someone can move in time in any direction and with any speed. In this way [travels through time](#) are possible. (E.g. it is possible to repetitively shift back in time to years of our youth in order to accomplish the so-called "imprisoned immortality" described in item #H1 from the abovementioned web page named [immortality.htm](#), and in item #E1 of the different web page about the [philosophy of parasitism](#).)

The most vital in this software definition of time is the structure (design) of this "timespace" ("omniplan"). The closest things to which this structure could be compared are so-called **objects** in a version of present programming of computers which is called the OOP (i.e. Object-Oriented Programming). For example, a given object existing in the "timespace" of our physical world, e.g. a person, is similar to the OOP computer program which defines an object visible on screens of our present computers, e.g. similar to the program which shows a button (e.g. shaped like a human) on the screen of a computer (this button can also be made in the shape of a stone). Means, in fact this person which we see is actually a program, similarly like a program is also this button on the screen of our present computer. But the counter-matter from the counter-world, inside of which the program of this person resides, provides the image of the person with the required appearance, actual state, changes to which it is going to be subjected with the elapse of time, etc. How this appearance of person is maintained, one can imagine easily by considering what would happen when present computers are made of a "liquid" and could e.g. assume shapes of any object, e.g. a given person - if the program contained in them would require them to look like a person.

Furthermore, in our physical world every "object" of this "timespace" ("omniplan") is positioned in a "nested" manner in the entire hierarchy of other objects. For example, several such "liquid computers" pre-programmed to form elementary particles from themselves, are combined together to form individual atoms. Then a series of such "liquid computers" forming entire atoms, is further combined together to form tissues from body of a given person. In turn these "liquid computers" that form tissues are also combined together to form an entire body. Later this body is a component of even a larger configuration - e.g. a whole family. This configuration is then a part of even larger nation. Etc., etc. - almost infinitively.

The subsequent "objects" which form the "timespace" ("omniplan") for our physical world are obeying certain laws. For example, they change themselves, they can be relocated in space or in time, etc. The only thing which people are not allowed to do with them is to generate them, or to destroy them before they had opportunity to manifest themselves in our world - this generation or complete destruction of objects is reserved for the universal intellect (God). Therefore, time travel is able to change the fate of objects, but is unable to neither completely remove these objects, nor to create completely new such objects. For more information on the same subject see also the web page about [time vehicles](#).

\* \* \*

**Notice, that because of the existence and work on the Earth of these two types of time described above, with two drastically different speeds of**

elapses, it is a huge mistake of the old official science that the same human years are used for the estimation of the age of inanimate matter - such as rocks, fossils, etc. It is because correct would only be to determine precisely the differences in speeds of elapse of both these times, and the subsequent introduction of two different units of the degree of aging - one for humans and for other creatures, while the other unit of aging for inanimate matter. After all, the committing of such a huge mistake in the matter of the elapse of time - which, after all, is a major component of practically every process on Earth, the old official science also commits at least equally huge error in virtually every other matter.

---

## **Part #H: Why it is worth to learn the Concept of Dipolar Gravity and to implement it in our understanding of the world around us:**

### **#H1. Benefits which we draw through learning about the Concept of Dipolar Gravity:**

Everyone who managed to undertake the effort of thorough learning of the new scientific theory discussed on this web page, benefits from this effort in a number of different ways. Because these benefits carry the potential of introducing a huge positive change to quality of our everyday life, it is worth to list and to describe here at least the most vital amongst them. Here are these ones, which influence on the further life can be perceived by practically everyone amongst us:

**(1) We begin to consider findings and recommendations of the Concept of Dipolar Gravity in our everyday life.** If we really learn thoroughly scientific foundations and findings of the Concept of Dipolar Gravity, then almost for sure it will convince us to a different view of the reality around us. In turn, if someone adopts this different view, then also begins consider and implement in everyday life the findings and recommendations that it generates. The consequence is that only then we begin to reap various benefits stemming from the knowledge of this concept. For example, many phenomena which previously we even did not notice, rapidly begin to demonstrate the operation for us, many puzzles which other people do not understand rapidly begin to have the rational explanation for us, our thought horizons become indescribably widened, our view of the world and systems of values will change completely, we will gain the peace of mind and

a kind of quiet serenity, we will find a correct direction as how to lead our lives, many stresses and unnecessary emotions disappears from our lives, our health and wellbeing is improved, etc., etc.

**(2) Learning the key which opens the access of humanity to unlimited resources of energy.** The action of telekinesis as a reversal of the phenomenon of friction allows to undertake the construction of so-called "free energy devices". These devices extract thermal energy contained in free state in our environment, and convert this energy into some useful form, e.g. into heat, electricity, motion, etc. The mastery of these devices will open for humanity the access to practically unlimited amounts of energy.

**(3) Learning explanations for almost all puzzles and mysteries which so-far were considered unexplained by our official science.** After all, the Concept of Dipolar Gravity provides scientific explanation for a huge number of such puzzles and mysteries. Numerous their examples are discussed even on this web page. A whole array of further ones is explained on related web pages listed in item #K2 below. Even still more of such puzzles is described and explained in the full edition of this concept, means in volumes 4 and 5 of my newest [monograph \[1/5\]](#). The most vital in explanations of this concept is that for almost every amongst these puzzles and mysteries, the concept presents wide scope of evidence which documents that a given explanation is actually the correct one. In turn, when the present puzzles are explained, our life becomes enriched. After all, then we can start to act and create - instead of just wonder and be amused.

**(4) Gaining the key to a more moral, peaceful, fulfilled, and constructive life.** Many findings of the Concept of Dipolar Gravity introduces new qualities into our life. Their example is the formal scientific proof revealing that [God](#) in fact does exists, and explaining the nature and operation of God. After all, such a proof changes our speculations and views which were based just on faith (or disbelieve) into a scientific knowledge and certainty. In turn it is known well, that **always one can stop believing, but one never stops knowing**. In turn after the change of our faith and speculations about God into a scientific knowledge and certainty, our life starts to gain a completely different meaning. After all, our systems of values become changed, while the to-date uncertainty and fear are replaced with the serenity and the feeling of someone's protection. Another example of a part of this concept, which introduces a different quality to our lives, is the philosophy resulting from the Concept of Dipolar Gravity and called [totalizm](#). Totalizm is currently the only philosophy on Earth, which indicates the really working in practice and already verified in action recipes for a happy and fulfilled life.

**#H2. Research projects which are worth completing in order to improve further the theory described here:**

No theory is perfect and completely finish from the first moment it is formulated. In fact the formulation of any theory is just a beginning of work on the further refining and developing it to the final perfection. Similarly is also with the **Concept of Dipolar Gravity**. The formulation of this concept only initiated a whole series of detailed research on specific findings which stem from it. This research actually lasts until today. Many potential topics of the research which still awaits to be completed are described in various subsections of my newest **monograph [1/5]** - as an example see there subsections H10 or H1.3 from volume 4, or subsections JG9 or JG3 from volume 8. Numerous out of these topics are so urgent, that they require addressing with the first priority. Below I am indicating several examples of such topics, which because of their urgency should be researched with the highest priority.

**(1) The explanation of the Concept of Dipolar Gravity for mechanism which governs weather and climate on Earth.** This topic is explained more comprehensively on a separate web page named **hurricanes**. It is even more urgent lately as our civilisation is continually experiencing huge losses because of the present inability to control weather and climate, and inability to even predict exactly changes of weather and climate.

**(2) Our learning of mechanisms which govern the release of karma for each kind of complex feelings.** This research topic is enough attractive to be undertaken by practically everyone. In turn findings which it may introduce, are able lift the quality of life for each one of us. A more accurate description of it is contained on the web page named **karma**.

**(3) The development of methods for an effective restoration of amounts of our moral energy.** The level of moral energy which we currently accumulated in our counter-body bears a huge influence on our wellbeing. After all, when we lack of this energy we fall into **depressions**, or even many people commit **suicides**. The philosophy of totalizm developed methods of an effective restoration of the level of this energy. But these methods still require further research and perfecting. The problem of the link between the level of our moral energy and our wellbeing is already discussed on another web page named **nirvana**. Soon also further web pages will be developed on a similar subject, which will be devoted to the problem of depressions and suicides. Furthermore, this matter is relatively well presented in subsections I5.5, JG3.7, and OA8.6.3 from volumes, respectively 5, 8 and 13 of my newest **monograph [1/5]**. The interesting attribute of research on the link between our wellbeing and the level of our moral energy, and on methods of restoration of the level of our energy, is that this research, systematic monitoring, and empirical experiments on this subject, can be carried out by practically everyone amongst us.

---

**Part #I: How really this our universe is constructed and works in the light of findings of the **Concept of Dipolar Gravity**:**

Orthodox science scare us with seriously sounding fables about the origins of the physical world in which we live. According to it, at the very beginning there supposed to be the so-called "big bang". Then galaxies began to "escape", laws of physics began to "form just by themselves", etc., etc. Furthermore, the life "evolved just on its own" by a complete accident. Also by a complete accident the evolution of man from an ape took place. In turn one day all these things are going to begin shrinking senselessly and implode without any reasons, until one day all this disappears again into nothingness. Such fables sound very professional and scary. After all, scientists saturated them with scientific terminology incomprehensible for ordinary people and supported with unverifiable "evidence". In addition, these fables are very fatalistic. For example, similarly as these countless scares spread by evil doers they also contain the constant warning about an inevitable "end of everything" - thus scaring more naive people. But are these fables true? Religions and the church state that NOT. But religions are too old fashioned and too dogmatic to explain WHY these scientific fables about the origins and nature of the physical world are just only fables for thoughtless and naive people. Fortunately the Concept of Dipolar Gravity described on this web page shares the views of religions. Also this concept has the access to research methods and to evidence which in the final count is able to indicate **why** present science and scientists are at wrong in these matters, and which explanation is closer to the truth than this erroneous picture disseminated by the official science. This part of the web page briefly summarises the stand of the Concept of Dipolar Gravity in the matter of the origins of our physical world.

## **#1. Why present scientific description of the reality around us is a deception invented only to divert our attention from attempts to describe this reality correctly, and to discourage any further continuation of such attempts:**

Our present official orthodox science widely advertises its apparent "accomplishments" in establishing the origin of the physical world in which we live. However, the same science is still unable to explain so basic matters as what is the mechanism of formation of magnetic field and electric field, or where the intelligence of elementary particles comes from. In turn if the orthodox science is still unable to explain such basic matters, then the logic tells us that also in these important matters, such as the origin of the entire world in which we live or the origin of mankind, this science must also be in even a greater error. And this prompting of logic is true. If one analyses thoroughly the actual "evidence" and logical deductions on which these statements of orthodox science

are based, then it rapidly turns out something shocking. Namely these statements are based exclusively on premises, not on facts - and even these premises are very shaky. In turn the actual "evidence" which would support the conclusions unjustly derived from these premises (instead from facts) in reality does NOT exist at all. Therefore the [Concept of Dipolar Gravity](#) described here, has reasons to deny the validity of the descriptions of the surrounding reality by orthodox science, and to declare these descriptions not only to be erroneous from the very beginning, but also to be a complete nonsense. This concept has the following reservations to the present scientific description of the surrounding reality and physical world:

**(1) Present scientific description of the surrounding reality and physical world is completely deprived the explanation of the role of [God](#) in the creation of this world.** On the other hand, one of the most important breakthroughs that introduced the [Concept of Dipolar Gravity](#) to our understanding of the reality around us, is the [formal proof for the existence of \[God\]\(#\)](#) mentioned in item #E3 of this web page. In turn when God does exist - as the Concept of Dipolar Gravity has proven it formally, while scientists overlooked the role of God in their description of the surrounding reality, then it is sure that their scientific description must be erroneous from the very foundations. After all, this description avoids to address the influence of [God](#) on the creation of the world that God created. Science describes the world in a manner as if it originates and exists completely without God. This is a bit like an attempt to explain the origin of a house while completely overlooking the role of a builder who constructed this house.

**(2) The present scientific description of surrounding reality misses completely the explanation of the role of natural intelligence noticed by scientists in some behaviours of matter (e.g. in behaviours of so-called "elementary particles").** On the other hand, if the most elementary components of our world, i.e. elementary particles, display natural intelligence in their behaviour, then it is also sure that this intelligence impacts somehow the physical world which is constructed from these particles. So it must NOT be omitted in the description of the origin of our world. For comparison, if it is known that e.g. stones which are used for foundations of houses are able to move just by themselves, then the buildings which are constructed on such stones would be looking completely different than present buildings constructed on motionless stones. But scientists formulate their explanations of the origin of the physical world, as if there is no difference introduced by an intelligence which participated in this origin.

**(3) The present scientific description of surrounding reality avoids explaining the origins of software nature of some most basic phenomena of the physical world, such as energy, gravity, elapse of time, etc.** In other words, all explanations of the orthodox scientists assume purely "hardware" character of everything that surrounds us in the physical world. In fact these scientists never even consider that various primary phenomena of our reality have a "software" origin and character. However, as this is explained in Part #G of this web page, the [Concept of Dipolar Gravity](#) clearly revealed the software nature of all most fundamental phenomena of the physical world. For example, such basic phenomena as [energy](#), [gravity](#), [time](#), etc., in fact are natural

programs, not kinds of physical "hardware". In turn, if the science commits such an enormous error already at the very beginning of its claims, then conclusions which it derives must be completely invalid.

**(4) The Concept of Dipolar Gravity has also reservations because of the absolute lack of evidence which would confirm conclusions of the science to-date.** In fact whatever scientists indicate as supposed "evidence" in support of their claims, in reality is very shaky, can be explained on many different ways, and in practice does NOT conform to conditions imposed onto evidence. As an example of the absurd of "evidence" of the science consider the so-called "red shift" of the light of stars - which supposedly is an evidence for the "big bang" and the "escape of galaxies". However, if our planet is NOT located in the exact centre where the epicentre of this "big bang" was located, then in order to actually be such an evidence, only a part of stars should display this "red shift" - while another part should display a "blue shift". In order to understand the absurd of this supposed "evidence" for the "big bang", it is enough to consider what we would think of a close-minded scientist who would come up with a theory, that the Earth's atmosphere is just "imploding", because the blue colour of it in cloudless days displays the "blue shift" which is closely related to this "red shift" of the light from stars. After all, the red colour of stars observed in cloudless days carries surprisingly many attributes in common with the blue colour of sky in the cloudless days.

\* \* \*

Because of the facts listed above, all results of investigations of the official Earth's science to date about the origins and functioning of the physical world that surrounds us lose completely their validity. Expressing this in other words, **everything that orthodox scientists explain so-far about the origins and character of the surrounding reality is a huge "nonsense fallen from a top of ivory tower", which is not even near the truth on this matter.** In this nonsense one can clearly notice, that the descriptions of the physical world disseminated so-far by present official science are only a kind of masquerade and scary scientific monolog, which are aimed exclusively at turning people away from searching for the truth about the real origins of the world which surrounds us. For this reason, it is necessary to renew our efforts of describing the origins of the surrounding reality in more adequate way, coming out from the fact of the existence of God. The explanations provided below are trying to do just that in a brief manner. But before we introduce the picture of the surrounding reality which is including the role of God, and also the fact that all main phenomena of our physical world have the intelligent and software character, we must consider first how God evolved. After all, before this God could create the physical world that surrounds us, and then create humans, God himself must firstly somehow raise up from the initial chaos of the counter-world.

## **#12. How the evolution of God looked like:**

At the very beginning of everything the universe was composed of just a single world. By the Concept of Dipolar Gravity this most primary world of the

universe is called the **counter-world**. The key attributes of it include: the lack of boundaries (i.e. the infinitely large size), the infinitely long existence (i.e. eternity - means the lack of beginning and the lack of prospect for ending), spreading along four dimensions, and being uniformly filled up with an extraordinary kind of "liquid" substance - by the Concept of Dipolar Gravity called the "**counter-matter**". The counter-matter is an "intelligent substance" - in its natural state it has the intelligence of a "computer hardware". But in this first half of the infinitely long time of existence of the universe, when God was beginning to evolve, this counter-matter had only a potential for gathering information, but in these "times" it still did NOT contain any "program" inside. Thus, the counter-matter was then similar to a self-learning computer in which there is no any program installed as yet. After all, counter-matter in the natural state is able to accumulate and to store information, is able to think, etc. Also every single particle of counter-matter has attributes which in human computers are assigned only to the so-called "accumulator". While displaying the potential for acquiring information, this counter-matter is a highly moveable kind of liquid - slightly similar to boiling water. So in these primeval "times" it streamed chaotically from one area of the counter-world to other areas, formed whirls and streams, and "played" with its own capabilities. Because a potential attribute of this counter-matter is the ability to self-learn, during this playing with itself it gradually learned about itself. In turn, this knowledge was accumulated in it as increasingly more complex "natural programs" which started to fill up the memory of this counter-matter. At some stage of the development of the universe, these natural programs become so developed, that they acquired their self-awareness. This self-awareness was the beginning of the formation of what we now call God.

In the scenario described above which portrays the beginnings of our present universe and the beginnings of God, the most difficult to imagine is probably the topic of **infinitive size** of the universe. After all, for human minds used to limitations, the infinitive size is difficult to comprehend. In turn, the universe with limited size would not be possible to exist, nor possible to explain, nor also possible to understand. After all, there would always need to exist "something" beyond borders of such a finite universe, and thus it would always induce a question in us, what is beyond these borders. I personally believe that God in his numerous acts of creations gave us numerous hints, which indicate how this infinite universe looks like. (These hints are contained e.g. in the design and development of humans created on God's own image, and also in the manner human imagination works - e.g. in the fact that people are unable to imagine infinitive "something", but without any difficulties they imagine infinitive "nothing". After all, according to the philosophical law of totalizm discussed briefly in item #B4 from the web page named [telepathy.htm](#), "whatever cannot be imagined nor invented, for sure does not exist".) So, supported by the findings of the Concept of Dipolar Gravity, I am going to explain here how I understand now this infinitive size of the universe suggested by God's hints. Here is my explanation:

**The universe in fact is a space of infinitively large size. After all, infinitively large can only be a space. This space has NO end nor borders. Thus, nothing exists beyond it. This infinite space of the universe is uniformly filled up with "counter-matter", forming the entire so-called "counter-world". This counter-matter also spreads infinitively. It is within**

**this counter-matter that gradually evolved our God. Later from a limited volume of this infinitely spreading counter-matter God created our "physical world". This "physical world" has already a limited size. Behind borders of our physical world continues further this infinite space filled up with chaotically moving intelligent counter-matter. Thus, our physical world is like a kind of a gigantic "droplet", "bubble", or "cocoon" of matter having finite dimensions, suspended inside of the infinitively large space of the counter-world filled up uniformly with intelligent counter-matter.**

However, the above picture of the physical world requires adding, that because of the mechanisms of the operation of the universe, this "bubble" or "cocoon" of our physical world has approximately the shape of a "pancake", and it is quite a folded one (not mentioning that because of the action of continually moving counter-matter it slowly changes its shape all the time) - as is described in more details in the literature referred to from item #G3 of this web page.

In the initial stage of the evolution of this software self-awareness in the counter-matter of the universe, almost for sure several brotherly software creatures appeared, all of which had self-awareness. After all, the theory of probability states, that if any process is possible in a relatively large area, then for sure this process occurs in a number of places simultaneously. The above suggests, that at some stage of the infinitively long existence of the intelligent counter-matter, more than one such self-aware brotherly programs-creatures appeared in various regions of the counter-matter. These ones amongst brotherly programs-creatures with self-awareness, which appeared in the same area of the counter-world, probably began to compete with each other. So in the memory of counter-matter a kind of "brotherly wars of self-aware programs" probably took then place. In these wars the winner was a single program with the highest level of wisdom. It overcame or subdued all other programs that operated in its region of the counter-world. Probably, the source of its advantage over other brotherly programs - was the wisdom, and the principles which it used in fight - that stemmed from this wisdom. This victorious program is our present God, or more strictly - this component of God which the Christian religion calls **Holy Ghost** (the Concept of Dipolar Gravity calls it the "universal intellect"). In turn these other brotherly programs, which evolved in the same area of the counter-world as our God, but which had a lower level of wisdom and thus which lost these primeval wars and were destroyed or made to comply, probably due to their unwise behaviours become the source of the idea which presently we call with the use of general name "evil" or "unrighteousness". Probably the memory of this primeval competition or battle, which with the elapse of time led to the creation of the single unifying program-being which presently we call the universal intellect (God), survived to our times in the form of idea of a fight of good with evil. In later times God has embedded the experience from this fight of good and evil into the principle of operation of the present physical world described in item #I4 below.

What is the most interesting, in the **Bible authorised (inspired) by God**, most probably God describes this His primeval fight, and His victory accomplished due to the wisdom. For example, in verses 10:1-3 from the Biblical "Book of Wisdom" (chapter "Wisdom Preserves Her Followers"), is written - I am quoting here verses from the US Catholic Bible, which in July 2013 was available, amongst others, at the internet address **usccb.org/bible/wisdom/10**: **"She [i.e.**

the Wisdom] preserved the first-formed father of the world when he alone had been created; And she raised him up from his fall, and gave him power to rule all things. But when an unrighteous man withdrew from her in his anger, he perished through his fratricidal wrath."

At this point it should be noted, that in other areas of the infinitely large counter-world, which are too far away from our God for Him to interfere with them, also probably self-evolved similar self-aware software beings. Thus, they probably create their own separate "cocoons-worlds" in which they themselves become gods. As it is explained in item # B1.1 of the web page named [antichrist.htm](#), our God is certainly aware of their existence and activities. Therefore, out of necessity, He must also reckon with the possibility that sometime in the distant future He may need to confront those other gods, while people of our God may need to confront the inhabitants of other worlds that these distant gods created. This is why God is already grooming people into resourceful, hardened in battle, and moral "**soldiers of God**" - as this is explained further on a number of my web pages, e.g. in item #J3 from the web page named [malbork\\_uk.htm](#).

In the result of this competition of self-aware brotherly programs-creatures, which with the elapse of time led to the appearance of single God (or more strictly to the appearance of this component of the three-componential God, which the Concept of Dipolar Gravity calls the [universal intellect](#)), the universe went through a dramatic change. Namely, to the initially existing "counter-world" filled up uniformly with potentially intelligent and self-learning counter-matter, another "virtual world" was added, which was inhabited by the universal intellect (God) and by other natural programs that control the behaviour of counter-matter and that remain under the control of this single (our) God.

Of course, God draw correct conclusions out of this first period of its own evolution. For example, one of these is the principle to never form competition for itself (i.e. if different beings need to be created, then these must be placed in a separate world created especially for them - as God did this with humans). Another conclusion is that the fight of good and evil can be utilised as a vital factor which accelerates the development and evolution, and which increases the quality of the final outcome.

The prejudice which we nurture allow many people to accept the [self-evolution of man](#), but do NOT allow them to even think of the self-evolution of God. But in spite of these prejudices, in fact self-evolution of God is structurally much more easy to appear than the self-evolution of man. God is structurally consistent intellect, as it has the character of the huge self-aware program. Thus for nature was much easier to complete the self-evolution of this structurally consistent God, than it would be in case of accomplishing a self-evolution of such structurally complex creatures as man. In fact, when there is a computer, than a program for it is much easier to create than to create e.g. a living tissue. The evidence for it can be our present scientists - a large proportion of which writes good programs, but none of them is able to create even a smallest blade of a most primitive grass. Counter-matter is a kind of self-learning liquid computer. So if these is somewhere such a self-learning computer displaying attributes of the counter-matter, then even if initially it is empty, with the elapse of time it must evolve inside a kind of self-aware program. This thesis can be tested

experimentally in the future, because one day the humanity probably develops such self-learning computers having characteristics of the counter-matter.

To summarise this item, **the Concept of Dipolar Gravity confirms that in fact a coincidental self-evolution, similar to the one which present orthodox science attributes to the origin of man, actually did take place in nature. But the outcome of this coincidental self-evolution was the appearance of God, not the appearance of man. Only this God later created man with the use of empirical method of trial and error - which could also be called the "intelligently controlled evolution".**

\* \* \*

Independently from this item, the process of the self-evolution of the second component of God described here, means of this huge natural program which religions call the "Holy Ghost" while the philosophy of totalizm calls the "universal intellect", is presented on several further totaliztic web pages, for example in item #B1 from the separate web page [evolution.htm](#), or in item #B8 from the web page named [god.htm](#). I highly recommend having a look at these web pages. After all, they elaborate from a different point of view the information provided in this item.

### **#13. What constraints motivated God when he created our physical world:**

In this first stage of the existence, when God still did NOT create the "physical world", he must feel very lonely. After all, he was the only intellect having self-awareness in the entire universe. So at some stage he decided that he should create various other beings on his own image - means slightly similar to him. From times when he was forced to fight with other similar to him natural programs-beings for the domination over the universe, this God remembered, that it is NOT good idea to create a competition for himself. So he decided, that this new world that he intended to create, he will design in such a manner, that he is going to have a complete control over it. However, for this he needed to cause that this intended creation is going to be separated from the world in which he lives. Means, that what he is creating must obtain a form of a separate physical world, not just be a different kind of beings living in the God's own world. Furthermore, in order to maintain a full control over what happens in this separate physical world, God decided that it must have a software form, means that it is going to be formed in such a manner that foundation of the operation of it were programs which he is able to control in any way he wishes. Of course, it is absolutely sure that the creation of the present physical world was proceeded by various other trials. This is even confirmed by mythology. During these earlier attempts, several less perfect worlds were created, which God was forced to destroy. But slowly His knowledge in the area of creation of a new world grew to the level, that he was able to create our present physical world with its unique system of matter, phenomena, attributes, and laws which govern over all these.

In order to fulfil these design constrains that concerned his creation, God

designed the physical world in a manner in which we people design worlds of robots at present. Means, as a basis for the operation of this world he used phenomena of purely software nature. In this way he has a full control over the course and outcome of these phenomena - similarly as people who build a world of robots will have in the future a full control over programs that manage the operation of these robots. Furthermore, he make sure that everything that happens in this physical world is separated with an impenetrable barrier from everything that happens in his own world. In this way he make impossible any intervention of creatures from the physical world into matters of his own world. Finally he make also sure that beings which live in this separate physical world are not able to see anything that is outside of their own world, especially were unable to see him - means God. In this way he guaranteed for himself the more perfect control over this physical world. After all, he (God) sees everything that happens in this physical world, but inhabitants of the physical world are unable to see anything that happens in his virtual world.

To be honest, when the humanity finally grows up to times of creation of their own world of intelligent, self-aware, self-learning, and self-reproducing robots, for sure in its own interest it will also do exactly what God did with our world. Means, the humanity will make then sure, that these robots are going to live in a separate world, e.g. on some planet impossible for habitation by people, and that they will have no access to the world of humans. Otherwise, such more perfect than people, because self-aware, and able to self-learn and mass self-production robots, would be able to invade and to destroy the world of humans. People will also make sure that these robots will not be able to see people. For example, people will so design the vision of these robots, that these will be able to see only other robots and the so-called inanimate nature. In this way people will guarantee themselves the absolute control over these world of robots. Exactly the same did God with our physical world.

## **#14. How God created our physical world:**

***Motto: "The first programmer in the universe was God, the first program in the universe which was highly prized by a majority of users was our physical world."***

A relatively accurate description of each one amongst six basic phases of the creation of physical world is described in the Bible - see there the Book of Genesis, 1:1-31. On the basis of findings of the Concept of Dipolar Gravity I can definitively state, that this description is correct and true - only that it is made with the use of ancient terminology, and reported extremely briefly. Evidence which confirms this correctness is the fact that each one amongst six phases of the creation of the physical world described in the Bible, depicts the solving of a subsequent problem which stood on the path to the formation of this world and which is indicated by the Concept of Dipolar Gravity as the problem which really existed and which really needed to be solved at a given phase. Furthermore, the mutual order of solving these problems is agreeable with the order which,

according to findings of the Concept of Dipolar Gravity, must be followed during this creation. So let us now translate these descriptions from the Biblical into ours, means let us explain how according to findings of the Concept of Dipolar Gravity the subsequent phases of this six-stage process of the creation of physical world and evolution of humans looked like - if these phases are described with the use of present terminology.

**(1) The creation of the earth and light.** The first phase of the creation of our physical world that fulfils the requirements and conditions described in previous item #I3, required development of natural programs which transformed counter-matter from the counter-world into matter from our world. Counter-matter displays attributes which are exactly opposite to attributes of our matter. Therefore these natural programs needed to cause such behaviour of counter-matter, that attributes of this substance were reversed into exactly opposite. Due to this, "objects" representing all chemical elements (means "earth" - as in old terminology these elements were called), and also software "objects" which represented all basic phenomena of the physical world (means - mainly various kinds of electromagnetic radiation, or "light"), were formed from such natural programs and from counter-matter which implemented commands contained in these programs. These "objects" are simply natural programs and appropriate clusters of counter-matter which implement the content of these programs. Their description is provided, amongst others, on this web page in item #G4 above, and also on a separate web page about [time vehicles](#), where these objects are explained as basic components of the so-called "space time". In general, these "objects" can be compared to objects from present OOP (i.e. "Object-Oriented Programming), e.g. to an object of a "button" which appears on the screen of our computer. This is because these "objects" are very similar to such computer images (e.g. the image of a "button"). For example, on a computer screen such a "button" look as if it is a solid form, on which one can implement various manipulations, e.g. can shift it into a different area of the screen, change colour of it, enlarge or shrink it, etc. But in reality this button is still a program and an image formed by this program with the computer's hardware. Similarly these "objects" formed from natural programs contained in counter-matter, and from images formed by hardware of this counter-matter, also look as if they are solid, they can be subjected to manipulation and shifting, etc.

**(2) The creation of a dome which divides two fluids (waters).** After the matter and basic physical phenomena were created, God separated this matter and these physical phenomena, from counter-matter and from phenomena of the counter-world, through placing these inside of two completely separate worlds. In this way God created then an entire "physical world" - which the Christian religion calls [God Son](#). (This is a very accurate name, considering that this religion calls "God Father" the counter-world, while it calls "Holy Ghost" the "universal intellect" contained in the "virtual world".) Then God created an impenetrable barrier which separates this physical world from the counter-world. Through this barrier almost nothing can pass, apart from these natural programs that reside in the counter-matter.

Although in the description provided here this second phase of the creation of the physical world may appear to be a simple and easy, in fact it required the carrying out the complete reconfiguration of the counter-world. After all, every

object from the physical world received then its counter-material duplicate in the counter-world. Furthermore, the maintaining of the existence of this impenetrable barrier between both worlds, and also the software communication through this barrier, required the preparation of a huge amount of indescribably complex software, which maintains the cooperation of both worlds while physically separating them from each other.

**(3) The clarification of lands and seas and the evolution of plants.** After the separation and enveloping the physical world with the use of appropriate software, God began to define, using a different kind of software, the subsequent laws that prevail in this physical world. These laws gradually allowed God to subdivide matter into different consistencies of gases, liquids, and solid matter, separate these kinds of matter from each other, and also begun to experiment with creating first living organisms - which by the nature of things needed to belong to plants during that phase of creation.

**(4) The creation of stars and planets.** After the laws established by God for the physical world were programmed out and tested, God decided to enlarge and extend the developed then (small) prototype of the physical world. This enlargement and extension depended on the creation of an entire present physical world and the entire "time space". In this way the volume of the entire universe was formed, which included all stars, galaxies, planets, etc.

**(5) The creation and evolution of living beings in seas.** After the basic principles of work and development of plants were mastered, God began to gradually introduce and evolve various animals. At the beginning he did it mainly within waters of oceans.

**(6) The creation and evolution of land animals and a gradual creation of human beings.** After all details of genetic codes and principles of evolution were programmed and tested, God finally could proceed with gradual development of increasingly more perfect land animals. In the final stage he could also evolve human beings. How he accomplished the evolution of humans it is explained on the separate web page about the [evolution of man](#). It is worth to notice, that **God** accumulated in man that he created the essence of an entire experience from the process of God's own evolution. For example, a human child immediately after the birth is like a self-programming, intelligent counter-matter was in times before God evolved in it. After all, a child is like an empty, self-programming computer. Only the later life of this child is to program into it the knowledge of an adult human. In turn the mutual contradiction between the persuading people by their numerous feelings, to do whatever later is going to turn bad for them, and simultaneous logical letting them know by their organ of conscience what later turns out to be good for them, is a memory written into people and expressing the fight between good and numerous forms of evil, which (the fight) at the very beginning of his existence God was forced to complete with other intellects similar to him that also evolved in the counter-matter almost simultaneously with God. In turn the principle that "ontogenesis repeats the filogenesis' way", (i.e. that the "development of an individual repeats the development of the entire specie") - described in item #C2 (5) of the web page about the [evolution of humans](#), is an illustrative demonstration to people of the entire history of their species.

**(7) Rest?** Although the Bible calls "resting" the present, seventh phase of the

creation of the physical world, in fact God all the time is perfecting his creation. This perfecting is possible, because the software of the so-called "time space" (described amongst others in item #G4 above) was so wisely accomplished by him, that it allows to introduce continuous improvements to practically everything that God wishes to improve. In turn, after any such an improvements is introduced, immediately the power of this improvement is extended to the entire "time space". On the basis of watching what happens in the universe and on the Earth, I am reasoning that God currently experiments with a self-perfecting organisation of so-called "human swarms". Such a "human swarm" is simply any civilisation composed of a huge number of imperfect humans and living in separation from other similar civilisations. "Human swarm" differs from insect swarms or animal flocks - the advantages of which over individual creatures God already experimentally tested long ago. Namely, human swarm does NOT have a "queen", while all participants of it obtained approximately similar characteristics and rights, and all of them obtained the free will. **The present goal of God seem to be the development of a system of moral and social laws, which are going to cause that such a "human swarm" as whole can become a creation much better than each single member of it.** (In other words, God tries to improve the physical world in such a manner, that these "human swarms" which live according to laws established by God, as whole become much better quality in every aspect than is each person constituting such a swarm considered separately.) After all, only by such a kind of experiments various facts can be explained, e.g. a fact that God created conditions on the Earth in which the goodness and morality must break free through barriers placed in front of them by evil doers, or the fact that in recent times a clear drop in level of average intelligence and average perfection can be noticed, as it occurs both in people and also in human relatives from the space. (For example, the present generation is at average significantly less intelligent and decisively less perfect than was in average the generation which lived only around 50 years ago.) I will not mention here, that this present goal of God, as usual, runs against all believes of Earthly scientists who claim that "a whole is always as good as the weakest link of it". Unfortunately, as always, orthodox scientists who spread these kinds of claims do not take under consideration the experience of God in making impossible accomplishable.

\* \* \*

I personally believe that the development of the physical world does not finish on the present seventh phase. Means, does not finish on the development of conditions in the physical world for self-creation and self-improvement of highly moral and socially responsible human swarms. In my opinion the evolution and perfecting of the universe is going to proceed practically forever. Not without reasons God places so much emphases on learning and on logical thinking. I believe that in a relatively not-too-distant future the next phase of the creation is going to advance these totaliztic human swarms (civilisations), which managed to accomplish the level of true immortality, and which in fact fulfilled the requirement of God that as a whole they are in every aspect much better than every single (imperfect) individual from which they are composed. (Notice that this "true immortality" is a kind of immortality much higher rank than the "imprisoned immortality" mentioned above in item #G4 of this web page, and

described more comprehensively in item #E1 of a separate web page about the [philosophy of parasitism](#). The true immortality is accessible to only these civilisations which pedantically practice a philosophy belonging to the same kind as [totalizm](#). This is because it requires exceptional creativity in order to develop time vehicles of a superior kind.) According to my predictions, this next phase of the creation and improvement of the physical world will be:

**(8) A transformation of some perfect "human swarms" (i.e. totaliztic civilisations) into civilisations of Gods.** This transformation is going to depend on opening the access for several selected "human swarms" (civilisations) that fulfilled the requirements imposed by God, to the knowledge as to how form further worlds from the counter-matter, similar to our physical world. In this way such selected "human swarms" are to begin the creation of their own worlds similar to our physical world. Then they are going to fill up these their created worlds with beings which they are going to create all by themselves. Worlds formed by these human swarms (civilisations) can be called "worlds of 4th level" (our physical world is the world of 3rd level). In turn the Christian religion probably would call them "God Grandchildren" (if only it learns somehow about the existence of these worlds - in spite of its hermetic nature).

Of course, perhaps also our civilisation, but for sure the civilisation of [evil parasites](#) who secretly occupy the Earth, interests the question of what God is going to do with all these rebellious human swarms with which God presently experiments, but which do NOT comply to the God's quality requirements because they commonly break laws that God established. Unfortunately, everything indicates that after reaching this eighth phase of creation, these civilisations which turned their backsides to God become obsolete. God will not need them anymore. So almost for sure all of them became annihilated. This annihilation is already pre-programmed into their destiny in the form of so-called "non-existent existence" described in item #E5 from "Part #E" of the web page about the [philosophy of parasitism](#).

## #15. The profession of programmers - the profession of God:

***Motto: "In programmers not only bodies are created into the image of God, but also their profession imitates the most fundamental skill of God."***

If we ask any person, which profession is the most similar to the profession of God, the majority of people would tell that this is the profession of priests. However, in the light of this web page, it turns out that **the profession which mimics exactly the profession of God is a "programmer"**. Especially if such a programmer prepares programs of a technical nature and designation, which service some devices. In fact it turns out that "the profession of a programmer is a godly profession". So programmers can proudly state, that not only their bodies are created into the image of God, but also their professional activities imitate the most fundamental skill of God.

This close relationship between the profession of programmers and the fundamental skill of God, introduces vital consequences. After all "nobility obliges". For example, it imposes a duty onto programmers, to not limit their activities to just multiplying programs. Since they have a godly profession, they should also try to act similar to God. Means they should try to increase their knowledge on every subject, not just on the subject of programming, and also try to contribute actively to perfecting everything around themselves. This perfecting includes also the more thorough learning principles of the philosophies of totalizm and parasitism - so that the morality of programmers begins to coincide with intentions of God as well.

## #16. Qualities imposed by God onto principles of existence and operation of our physical world:

Of course, God did not create the physical world just to have problems with people who negate his existence. In fact God created our physical world mainly in order to continually increase his own knowledge by watching what we are doing, and in this way to guarantee the ever progressing evolution for the universe towards the increasingly more perfect form. So in order to be able to learn through watching what happens in the physical world that he created, God intentionally gave to this world a whole range of attributes and qualities. Let us list here the most important out of these:

**(1) The maintenance by God a full and continuous control over absolutely everything that happens in the physical world.** The physical world works because of programs that God developed. Through these programs God has absolute control over everything what happens in the physical world. Thus practically nothing happens in our world without at least the permission from God. What even more interesting, in fact God not only implements all moves which people perceive as "good", but also all moves which for people are not so pleasant because they represent e.g. punishments for what people did in past. Only that these punishments unpleasant for people God usually serves to us either with hands of bad characters which God controls, or via actions of so-called forces of nature.

**(2) The inspiration and forcing the progress of knowledge and continuous perfecting in all creatures that inhabit the physical world.** The physical world was intentionally so designed, that everything in it inspires to logical thinking, deductions, research, increase of knowledge, etc. For example, **all creatures which inhabit the physical world were purposely created as highly imperfect** (after all, if God wishes, he could create everyone much more perfect - but then everyone would have much less to learn). In addition, all people resisting this learning are forced by God to increase their knowledge with various punishments which they bring onto themselves with their own stupidity. Interestingly, hints for learning, and also logical links which inspire investigations,

hide in practically everything that surrounds us, even in the most banal matters.

**(3) The making possible in physical world to accomplish any goal that we can only invent.** In fact, the design of the physical world is so perfectly though over, that there is no goals impossible to accomplish. The only thing that people must learn, or earn for themselves, is how a given goal can be accomplished.

**(4) The providing a complex and perfect solution to every problem that can only appear in our physical world.** I.e. the principle which God implemented in every aspect of the physical world, is that "every problem from the physical world must have its own solution embedded into it".

**(5) The reassuring the absolute justice for every creature which inhabits the physical world.** All action of every creature which inhabits the physical world are continually watched and judged by God. Every one amongst these creatures is justly rewarded or punished depending how it acts. What even more interesting, **God** in fact does NOT know nor practice forgiveness, which for political reasons is promised by some religions.

**(6) The full separation of beings which inhabit the physical world from beings which inhabit the virtual world.** In order to be a being in the virtual world (i.e. the one which is inhabited by God) a given natural program must display certain attributes. Programs which do not show these attributes, are over there just kinds of intelligent registers (i.e. files or databases). This is a bit similar to what we already know from our computers. Namely, in order a given file from the computer's memory in fact was a program, it must be composed of commands understandable by a given computer, and also the name of file in which this program is stored must have the extension ".exe". Computer files which do not meet these conditions for a computer are just sources of data. Well, God so designed all beings from the physical world, that they are beings only inside of this physical world. In turn when their awareness is shifted to the virtual world, over there they become only intelligent registers, popularly called "souls" - i.e. natural equivalents for files with data or for databases in our present computers.

**(7) The formation of the physical world in such a manner that still this world fulfils the condition that "absolutely everything in the entire universe is only one amongst many different manifestations of intelligent counter-matter and natural programs which reside in it and which control the behaviour of it.** In order to express this in different words, we ourselves, as well as matter and everything else that surrounds us, in fact is made of counter-matter supplied in appropriate programs which control this counter-matter. So everything in our world has the software nature similar to the nature of these "buttons" from screens of present computers - which I described in items #I4 and #G4 above. Thus God controls everything via this software, and he can at any moment of time change it in a manner in which he wishes. We only thing that we are formed from solid matter and that laws of the universe which surrounds us do not change. In fact we are only natural programs, and images formed by these programs from liquid counter-matter which behaves according to commands issued by these programs.

\* \* \*

The above qualities embedded by God into the physical world hide inside a

vital message which us people should take to heart. This message states that if in life we decide to act according to the will of God and thoroughly fulfil duties which God imposed onto us, then our life becomes one long string of happiness and success. This is because God has prepared in advance **rewards** in the form of solutions for everything that we are able to think or wish for. In every moment of time these solutions are to be made available for us - if we only earn them with our actions. But if we refuse to cooperate with God and begin to act against his intentions, then God has also prepared for us appropriate **punishments**. Also he inevitable is going to use these punishments in such a situation.

---

## **Part #J: If the reality contradicts science then let us name the situation instead of putting heads into sand:**

### **#J1. E.g. let us give life to the "Pajak's serpent" in order to name and explain simply a whole range of scientific paradoxes and puzzles:**

***Motto: "If something displays manifestations of the existence, we need to name it in such a manner that we are able to talk about it freely."***

When someone looks carefully into what on one hand is stated by the official human science, while on the other hand what emerges from the real life, then hits in eyes the increasingly wider discrepancy between these two. For example, in the previous item #D2.1 is explained, that the life, empirical sightings, and logics proves that so-called "red shift" in light of distant stars is another evidence for the fact that the physical world was created by God as a stable stationary world. But the orthodox human science insists in erroneous claiming that the same "red shift" of light from distant stars is a proof for the "Doppler Effect" caused by the "escape of galaxies". The science disseminates also so-called "Murphy's laws" in order to explain many strange events and paradoxes, although is unable to carry out even a single repetitively verifiable experiment in which the action of these supposed "Murphy's laws" actually is demonstrated. In order to be even more funny, the orthodox science do NOT even seeks a manner to prove that the ESP actually works - in spite that in real life it is estimated that over 90% of natural resources and drinkable water was discovered on the Earth just because of the use of a divining rod or a pendulum assisted ESP. I will not even mention here the stand of official science in matters of UFOs or ghosts - in spite that almost

every newspaper overflows from information on their subject.

All the paradoxes and inconsequence of science can be diplomatically and collision free explained if we give the life to some symbolic kind of existence, which I would propose to name "Pajak's serpent". After all, scientists are well known from ignoring of the "Occam razor" and giving life to a whole range of scientific creatures. And so, for example the "Maxwell's Demon" helps the adepts of physics to understand that so-called "laws of thermodynamics" are not laws at all, but only statistic predictions which in normal conditions usually come true. In turn the so-called "Schrodinger's Cat" allows physicists to explain why the observing of something with the use of orthodox scientific techniques disturbs the behaviour of the observed object. (Nothing though is disturbed e.g. by observing with the use of [telepathic telescopes](#) - which perceive the information that every object of the entire universe sends continually about itself in a natural manner via telepathy.) So following the above "spirit of the science", herewith I am giving the life to another "scientific creature" of this type. I call this creature the "**Pajak's serpent**". It turns out to be extremely helpful in a scientific explanation of various paradoxes and inconsequence which do NOT fulfill the known rules and laws, and also in a scientific discussion of various phenomena which exists objectively but which the traditional name scientists are afraid to speak loudly because these names induce undesirable reactions in listeners (of the kind, e.g. UFOs, spirits, souls, auras, etc.). In addition, the introduction of this serpent allows to eliminate double standards, when the science states something completely opposite to the statements of everyday life.

The name "serpent" I am giving to this existence for reasons explained in item #E2 of the web page about [origins of evil on Earth](#). In the mythology (especially Christian), and also in the Bible, the name "serpent" was assigned to especially mischievous supernatural creatures. For example, the Bible in Genesis verse 3:1 describes it as follows: "**Now the serpent was more cunning than any beast of the field which the LORD God had made.**" Thus the name "serpent" corresponded to a slang swearing-word "reptile", used e.g. in saying "what a reptile lurks in him". These human-shaped creatures were very cunning, indescribably evil and ruthless, with angry and hostile expressions on faces and actions, extremely vindictive and mischievous, had supernatural powers similar to powers of devils, and behaved like present UFO-nauts (e.g. they used to abduct, exploit, torment, and harm people). Actually, I believe that it was because of the evil attributes of these mythological human-shaped creatures with snake skins (i.e. the skin illustrated on photos #4, #5 i #6" from the web page about the [church of St. Andrea Bobola from Milicz](#)), that in all cultures of the world the serpent is a symbol of evil, cunningness, cheating, corruption, etc. The best expression of this evil opinion of serpents (snakes, reptilians) is the Chinese proverb which states, that **even if you force a serpent into a bamboo tube, still you cannot straighten its twisted nature**. Therefore, to this new creature called the "Pajak's serpent" are assigned all attributes which characterized these mythological "serpents". If one tries to define these attributes in a scientific manner, then **the Pajak's serpent is an elusive creature brought to the life in order to facilitate scientific considerations and explanations of various paradoxes and discrepancies of empirics with theories, which (the creature) is characterized by a range of attributes and capabilities that are**

**unlimited negative contradictions of attributes and capabilities of a moral inhabitant of the Earth".** For example the "Pajak's serpent" always only does harm to everyone around it, it falsifies results of scientific experiments, it makes impossible the taking of progressive decisions, it lives forever, it has time vehicles - so it can shift back in time or move to the future, it has devices for listening to our thoughts, it has instruments for an immediate hypnotizing people, it always lies, it never does what it says that it will do, it is extremely lazy and practices the philosophy of [parasitism](#), it still lives in a system of slavery, it has no "free will" - but only does what was ordered to do, etc., etc. Furthermore, this ocean of evil that the "Pajak's serpent" spreads over the Earth is caused by it exclusively for materialistic motivations of the lowest grade. For example, it is extremely lazy - so in order to release itself from the need to work, it "abducts" people at nights, then from the sperm and ovule that it robs from these people it raises a kind of slaves that it calls "biorobots". Because it does NOT wish to loose time at nights for sleep, during these abductions it sucks from people their life energy with the use of its advanced devices, and then eliminates its sleepiness through regenerating itself with this energy. Because it does NOT wish to put effort into the development of computerized "artificial intelligence", it catches intelligent human souls and imprisons them in own computers in which these souls later slave for centuries in roles of intelligent controllers. Etc., etc. - for details of its "feasts" and "habits" see descriptions from the web page about [memorial](#).

With the use of the "Pajak's serpent" which displays all these attributes opposite to human ones, it is very easy to explain all the paradoxes, inconsequence, and deviations of present human science from whatever happens in the real life. For example, because of the lack of capabilities for providing a scientific explanation why someone caused so much evil to human science and to humanity by proposing such absurd and such harmful atheistic supposed-theory as this claim about the "expansion of the universe" and about a "big bang", while the only observable fact which this atheistic supposed-theory was based upon, is the "red shift" - such an explanation immediately results from the "Pajak's serpent". Namely, the "big bang" was forced onto the science, and then promoted, by this "Pajak's serpent". This serpent also explains how it is possible that just such a single "supposed-theory" introduced so many wrong ideas to cosmology and to life, which now the Concept of Dipolar Gravity needs so laboriously correct and repair, and why the effect which explains it in a simple manner and correctly, is still ignored by the official physics and known only empirically to e.g. "sea surfers". In turn if someone ponders why the so-called "Murphy's laws" work - although these laws in fact do NOT exist, the explanation is also simple - events described by these laws are simply tricks played on people by the Pajak's serpent. If someone ponders why a huge majority of natural resources is discovered by radiesthesia, although the official science is unable to prove that the ESP does exist - again the explanation is provided by this serpent. This serpent simply secretly falsifies results of official experiments in ESP, so that the official human science never is able to document the existence of ESP. Etc., etc.

Of course the "Pajak's serpent" has the use practically in all areas of science and technology, not just in physics or cosmology. Wherever a paradox, absurdity, bending of laws of the universe, or a shocking discrepancy between claims of

science and the course of true life, does occur, all such cases can be simply explained with the use of the "Pajak's serpent". For example, in medicine it explains why so large proportion of males have back pains (the serpent takes a revenge on them and pulls out their discs during nighttime "abductions"). Why so large proportion of women has the thrush of vagina - in spite that they are sexually inactive (a male serpent rapes them under hypnosis and infects them with thrush). In biology it explains who and why introduced theory of the so-called "natural evolution", the truth of which is NOT supported by even a single fact, while the knowledge about the creation of the physical world and man by God is ignored, in spite that the truth of creation is supported by entire ocean of scientifically undeniable facts, a part of which is described on separate web page about [evolution](#). (For example, one of such undisputable evidence for the creation of animals and humans by God indicated on the web page about evolution is the genetic code. The Shannon's "Theory of Communication" scientifically proved that every "code" or "language" must be developed by someone who has an intelligence. In turn only God could develop the genetic code - for details see item #B3 on a separate web page about [God](#), which contains a formal scientific proof that "God does exist".) In physics this serpent explains why such large number of laws and phenomena officially is forbidden for research and for publishing, in spite that about them there is a large volume of evidence (e.g. consider the stand of physics about UFOs, souls, spirits, auras, ESP, etc.). In astronomy this serpent explains why the "life-forms in cosmos" is searched on most distant stars, while all the evidence that these [life-forms](#) already for thousands of years creep secretly into our planet for robbery purposes, is simply ignored. In matters of faith this serpent explains why it is officially claimed that there is no God, although there is both [a formal proof for the existence of God](#), and also a wealth of evidence which consistently confirms the existence of God (such evidence in fact fills up the entire this web page). In sociology and in politics it explains why politicians, and increasingly larger proportion of the society, avoids telling truth. Etc., etc.

When considering the operation of the "Pajak's serpent" one needs to remember about attributes of this serpent listed before, e.g. that it is extremely lazy, that **the Pajak's serpent practices the philosophy of [parasitism](#) which makes it to always do only what it is somehow forced to do**, and that it has time vehicles - thus it has insight to future and knows exactly which present events will act against it in the future. Therefore the Pajak's serpent "plays its tricks" not for everyone and not in every case. The actions of it are selective and can be noticed only when a given event exerts a powerful influence on what is to happen in the future - while in the interest of this serpent lies to eliminate this influence. Therefore, for the actions of this serpent one should NOT consider every fall of a slice of bread with butter directed towards a rug - especially if these falls obey laws of statistics and physics. But if there was an official verifying experiment being organized, that would be later reported in textbooks, while a number of slices of bread that fell with butter downwards exceeded the number that results from the prevailing laws, then one would need to consider that the serpent was at work and secretly "helped" these slices to fell butter downwards. Expressing this in other words, **the "Pajak's serpent" sabotages only these events which in the result of this sabotage show later the discrepancy**

**between what typically happens in real life, and what is claimed by official science or what people are ordered to believe**, and also vice versa - means the interventions of this serpent take place when events from everyday life rapidly begin to deviate from the typical operation of laws of the universe. To sabotages of this serpent are mostly exposed people who do something that is to impact strongly the future of humanity.

The philosophy of [totalizm](#) teaches us that to every human word a three-dimensional luggage is attached. Only the intellectual dimension of this luggage contains the information what a given word means. In turn dimensions physical and emotional contain non-intellectual messages. The goal of these messages is to induce specific reflections and reactions in our minds, and to induce specific feelings in our emotions, every time when we encounter this particular word. It is because of this emotional and physical luggage attached to numerous popular names of what medicine calls "penis", "vagina", or "bo" ("bowel open"), that medical disciplines were forced to introduce their own terminology which induces only medically desirable reflections, reactions, and feelings. A similar situation is with other areas of life, which the science has a duty to research and to explain, but which shamefully it ignores because to their popular names of it is tied up just such a physical and emotional luggage intolerable for the science. So in order to include also these other areas into the sphere of interests of the official science, and this way to finish this naming impasse, it is necessary to give a scientifically sound name to these areas that are ignored so-far. The name "Pajak's serpent" is my proposal for solving this naming problem. Up until now this name does NOT seem to have any emotional luggage attached to it.

The bringing the "Pajak's serpent" to life and introducing it to scientific deliberations creates several advantages over the present manner of dealing by science with paradoxes and inconsequence which trouble it. (This dealing depends on "putting heads into sand" and pretending that a given problem does NOT exist.) This serpent allows to openly address problems and to discuss them without indicating them by unpopular names. From this is just a small step to practical discovery who actually is this "Pajak's serpent", what are aims of it, and with what methods it acts - means to bringing to light all findings that are described on web pages of totalizm (including this web page) without steering widespread criticism .

Independently from this web page about the [Concept of Dipolar Gravity](#), descriptions of the "Pajak's serpent" are contained, amongst others, on my autobiographical web page [about me \(Prof. Dr Eng. Jan Pajak\)](#), as well as in subsection I2.1.2 from volume 5 of [monograph \[1/5\]](#). In turn the mythological significance of the name "serpent" is discussed in item #E2 of the web page about [origins of evil on the Earth](#).

---

**Part #K: Summary, and the final information of this web page:**

## #K1. Summary of this web page:

The purpose of existence of people is to learn how to get to know the universe around us, and also to learn how then utilise this knowledge for such shaping this world that it is the most beneficial for all these who live in it. In turn this learning about the world is not effective if we approach it with wrong assumptions. Therefore the most vital goal, and perhaps also the most vital accomplishment if this web page, is to present much better than previously assumptions in our seeing of the world that surrounds us.

## #K2. How with the web page named "[skorowidz links.htm](#)" one can find totaliztic descriptions of topics in which he is interested:

A whole array of topics equally interesting as these from the above web page, is also discussed from the angle that is unique to the philosophy of totalizm. All these related topics can be found and identified with the use of [content index](#) prepared especially to make easier finding these web pages and topics. The name "index" means a list of "key words" usually provided at the end of textbooks, which allows to find fast the description or the topic in which we are interested. My web pages also has such a content "index" - only that it is additionally supplied in green [links](#) which after "clicking" at them with a mouse immediately open the web page with the topic that interest the reader. This content "index" is provided on the web page named [skorowidz links.htm](#). It can be called from the "organising" part of "Menu 1" of every totaliztic web page. I would recommend to look at it and to begin using it systematically - after all it brings closer hundreds of totaliztic topics which can be of interest to everyone.

## #K3. I would suggest to return periodically to this web page in order to check further improvements in descriptions of the Concept of Dipolar Gravity provided here:

The scientific theory called the [Concept of Dipolar Gravity](#), which is presented on this web page, is very complex and lengthy. Not without valid reasons it is also named the "theory of everything". After all, only the presentation of the "pure" part of it in my newest [monograph \[1/5\]](#) occupies two large

volumes. Added to this should be several further volumes which present "applied" aspects of it (e.g. the utilisation of it for the construction of propelling devices, devices for telepathic communication, or generators of so-called "free energy"). Thus, the summarising of so complex and so large theory in just the size of a single (this) web page, and in addition the explaining it in words enough simple to be also understandable to laymen, is a very difficult task. I am not able to accomplish this task in just a single writing session, but I must think over the matter of possibly the most understandable presentation of this theory, and then gradually improve my writing for a long period of time. Therefore, whatever is presented on this web page today, is not yet the final version of the internet descriptions of this theory. In future this web page will be periodically improved and simplified, while the content of it will be made increasingly more understandable to even laymen. So I am inviting to visit this web page again at some stage in the future, in order to check how the matters included into its content are explained then.

It is also worth to check periodically the blog of totalizm available at addresses: [totalizm.blox.pl/html](http://totalizm.blox.pl/html) and [totalizm.wordpress.com](http://totalizm.wordpress.com). On this blog many events discussed here are also explained with additional details written as these events unveil before our eyes.

## #K4. Emails to the author of this web page:

Current email addresses to the author of this web page, i.e. officially to Dr Eng. Jan Pajak while courteously to **Prof. Dr Eng. Jan Pajak**, at which readers can post possible comments, opinions, descriptions, or information which in their opinion I should learn, are provided on the web page named [pajak\\_jan\\_uk.htm](#) (for its version in the HTML language), or the web page named [pajak\\_jan\\_uk.pdf](#) (for the version of the web page "pajak\_jan\_uk.pdf" in safe PDF format - which safe PDF versions of further web pages by the author can also be downloaded via links from item #B1 of the web page named [text 11.htm](#)).

The author's right for the use of **courteous** title of "Professor" stems from the custom that "with professors is like with generals", namely **when someone is once a professor, than he or she courteously remains a professor forever**. In turn the author of this web page was a professor at 4 different universities, i.e. at 3 of them, from 1 September 1992 until 31 October 1998, as an "Associate Professor" from English-based educational system, while on one university as a (Full) "Professor" (since 1 March 2007 till 31 December 2007 - means at the last place of employment in his professional life).

However, please notice that because of my rather chronic lack of time, I **reluctantly reply to emails which contain JUST time consuming requests**, while simultaneously they document a complete ignorance of their author in the topic area which I am researching.

## #K5. A copy of this web page is also disseminated as a brochure from series [11] in the safe format "PDF":

This web page is also available in the form of a brochure marked [11], which is prepared in "PDF" ("Portable Document Format") - currently considered to be the most safe amongst all internet formats, as normally viruses cannot cling to PDF. This clear brochure is ready both, for printing, as well as for reading from a computer screen. It also has all its green links still active. Thus, if it is read from the computer screen connected to internet, then after clicking onto these green links, the linked web pages and illustrations will open. Unfortunately, because the volume of it is around a double of the volume of web page which this brochure publishes, the memory limitations on a significant number of free servers which I use, do NOT allow to offer it from them (so if it does NOT download from this address, because it is NOT available on this server, then you should click onto any other address from Menu 3, and then check whether in there it is available). In order to open this brochure (and/or download it to own computer), it suffices to either click on the following green link

[dipolar gravity.pdf](#)

or to open from any totaliztic web site the PDF file named as in the above green link.

If the reader wishes to check, whether some other totaliztic web page which he or she just is studying, is also available in the form of such PDF brochure, then should check whether it is listed amongst links from "part #B" of the web page named text 11.htm. This is because links from there indicate all totaliztic web pages, which are already published as such brochures from series [11] in PDF format. I wish you a fruitful reading!

## #K6. Copyrights © 2014 by Dr Jan Pajak:

Copyrights © 2014 by Dr Jan Pajak. All rights reserved. This web page is a report from outcomes of research of the author - only that is written in a popular language (so that it can be understood by readers with non-scientific orientation). Majority of ideas presented on this web page (and also in other publications by the author) are unique for the author's research, and thus from the same angle these ideas were NOT presented by any other researcher. As such, this web page presents a number of ideas which are the intellectual property of the author. Therefore, the content of this web page is the subject to the same laws of intellectual ownership as every other scientific publication. Especially the author reserves for himself the moral credit and copyrights for the scientific theories, discoveries and inventions mentioned or utilised on this web page. Therefore, the

author reserves that during repeating any idea presented on this web page (i.e. any theory, principle, explanation, deduction, interpretation, device, evidence, proof, etc.), the repeating person revealed and confirmed who is the original author of this idea (means, as it is used to say in creative circles, the repeating person provided a full moral "credit" and recognition to the author of this web page), through a clear explanation that a given idea is repeated from the web page authorised by Dr Jan Pajak, through indication of the internet address of this web page under which this idea was originally explained, and through mentioning the date of most recent update of this web page (i.e. the date indicated below).
